To find the database of images and view them as Thumbnails you will start from your Thinkpad with a good network connection then accessing the server "Pixi" where they are stored.

START - Run

Note:

The Run box will cashe every network address you access for later use in a nice list. If the next time you go to connect to "Pixi" and you haven't hit any other network resourse the "Pixi" address will still be in the Open field ready to go. Other wise click on the triangle on the right and select "Pixi" from the list.

When you are in the sub-folder with the images you are looking for change the window view mode by clicking on the Views icon near the top of the window and select Thumbnails. You can now visually scan for your image. Drag the desired image(s) to a folder in your Userdata.

Type:

pixi\z_wfu\WFUVRL\IMAGES then click OK

\\pixi\z_wfu\WFUVRL\IMAGES
