

**PHY 113 A General Physics I**  
**9-9:50 AM MWF Olin 101**

**Plan for Lecture 11:**

**Chapter 7 -- The notion of work**

- 1. Definition of work**
- 2. Examples of work**
- 3. Potential energy and work;  
conservative forces**
- 4. Comments about Exam 1**

9/24/2012

**Comments about Exam 1**

- **Scores  $70 \leq G \leq 100$**
- **Please keep working hard, even if your score is  $90 \leq G \leq 100$**
- **Please make an appointment to see me if your score is  $70 \leq G \leq 90$**
- **Solutions will be posted on the web on the course website (you will have to login with your WFU login and password)**

---

---

---

**Energy → work, kinetic energy**

Force → effects acceleration

A related quantity is **Work**

$$W_{i \rightarrow f} = \int_{r_i}^{r_f} \mathbf{F} \cdot d\mathbf{r}$$

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

4

---

---

---

---

---

---

---

**Definition of vector “dot” product**

$$\mathbf{A} \cdot \mathbf{B} = AB \cos \theta$$

Note that if  $\theta = 90^\circ$ , then  $\mathbf{A} \cdot \mathbf{B} = 0$

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

5

---

---

---

---

---

---

---

---

**Definition of vector “dot” product**

$$\mathbf{A} \cdot \mathbf{B} = AB \cos \theta$$

Example:  $A = 5$ ,  $B = 15$ ,  $\theta = 120^\circ$

$$\mathbf{A} \cdot \mathbf{B} = (5)(15) \cos 120^\circ = -37.5 \quad (\text{scalar})$$

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

6

---

---

---

---

---

---

---

---

## Definition of vector "dot" product -- continued

Suppose  $\mathbf{A} = A_x \hat{\mathbf{i}} + A_y \hat{\mathbf{j}}$  and  $\mathbf{B} = B_x \hat{\mathbf{i}} + B_y \hat{\mathbf{j}}$

$$\mathbf{A} \cdot \mathbf{B} = A_x B_x + A_y B_y$$

Note that the result of a vector dot product is a **scalar**.

Example:  $\mathbf{A} = 2\hat{\mathbf{i}} - 4\hat{\mathbf{j}}$  and  $\mathbf{B} = 1\hat{\mathbf{i}} + 3\hat{\mathbf{j}}$

$$\mathbf{A} \cdot \mathbf{B} = (2)(1) + (-4)(3) = -10$$

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

7

## Definition of work:

$$W_{i \rightarrow f} = \int_{r_i}^{r_f} \mathbf{F} \cdot d\mathbf{r}$$

Units of work :

Work = (Newtons)(meters)  $\equiv$  (Joules)

1 J = 0.239 cal

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

8

## Units of work:

work = force  $\cdot$  displacement = (N  $\cdot$  m) = (joule)

- Only the component of force **in the direction** of the displacement contributes to work.
- Work is a *scalar* quantity.
- If the force is not constant, the integral form must be used.
- Work can be defined for a specific force or for a combination of forces

$$W_1 = \int_{r_i}^{r_f} \mathbf{F}_1 \cdot d\mathbf{r} \quad W_2 = \int_{r_i}^{r_f} \mathbf{F}_2 \cdot d\mathbf{r} \quad W_{1+2} = \int_{r_i}^{r_f} (\mathbf{F}_1 + \mathbf{F}_2) \cdot d\mathbf{r} = W_1 + W_2$$

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

9

**iclicker question:** A ball with a weight of 5 N follows the trajectory shown. What is the work done by gravity from the initial  $r_i$  to final displacement  $r_f$ ?

- (A) 0 J   (B) 7.5 J   (C) 12.5 J   (D) 50 J

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

10

---

---

---

---

---

---

---

---

Gravity does negative work:

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

11

Gravity does positive work:

---

---

---

---

---

---

---

---

**Work done by a variable force:**

$$W_{i \rightarrow f} = \int_{r_i}^{r_f} \mathbf{F} \cdot d\mathbf{r}$$

In this case:

$$W_{i \rightarrow f} = \int_{r_i}^{r_f} \mathbf{F} \cdot d\mathbf{r} = \int_{x_i}^{x_f} F_x dx$$

9/24/2012

PHY 113 A Fall 2012 -- Lecture 11

12

---

---

---

---

---

---

---

---

**Example:**

The net work done by this force is the area under the curve.

$$W_{i \rightarrow f} = \int_{\mathbf{r}_i}^{\mathbf{r}_f} \mathbf{F} \cdot d\mathbf{r} = \int_{x_i}^{x_f} F_x dx = (5\text{ N})(4\text{ m}) + \frac{1}{2}(5\text{ N})(2\text{ m}) = 25\text{ J}$$

9/24/2012

PHY 113 A Fall 2012 – Lecture 11

13

---

---

---

---

---

---

---

---

**Example – spring force:  $F_x = -kx$** 

9/24/2012

---

---

---

---

---

**iclicker exercise:**

**Why should we define work?**

- A. Because professor like to torture students.**
- B. Because it is always good to do work**
- C. Because it will help us understand motion.**
- D. Because it will help us solve the energy crisis.**

**Next time we will discuss the Work-Kinetic energy theorem.**

---

Assume  $F_p \sin \theta < mg$

Work of gravity? 0

Work of  $F_p$ ?  $F_p \cos \theta (x_f - x_i)$

Work of  $f_k$ ?  $-\mu_k n (x_f - x_i) = -\mu_k (mg - F_p \sin \theta) (x_f - x_i)$

---

---

---

---

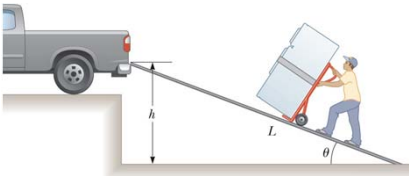

---

---

---

A man must lift a refrigerator of weight  $mg$  to a height  $h$  to get it to the truck.

For which method does the man do more work:

A. Vertically lifting the refrigerator at constant speed to height  $h$ ?

B. Moving the refrigerator up the ramp of length  $L$  at constant speed with  $h = L \sin \theta$ .
