

# PHY 711 – Assignment #1

08/29/2012

1. In evaluating the differential cross section for Rutherford scattering, it is necessary to evaluate the following relationship involving the scattering angle  $\theta$ , the impact parameter  $b$ , and a length parameter  $\kappa$  which involves the ratio of the interaction strength to the system energy:

$$\frac{\pi}{2} - \frac{\theta}{2} = \int_{\kappa + \sqrt{\kappa^2 + b^2}}^{\infty} \frac{b}{r} \frac{1}{\sqrt{r^2 - 2\kappa r - b^2}} dr.$$

Use Maple or other algebraic manipulation software to evaluate the integral to show that

$$b = \frac{\kappa}{\tan(\theta/2)}.$$
