

**PHY 711 Classical Mechanics and
Mathematical Methods**
10-10:50 AM MWF Olin 103

Plan for Lecture 5:

- 1. Chapter 2 – Physics described
in an accelerated coordinate
frame**

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

1

PHY 711 Classical Mechanics and Mathematical Methods

MWF 10 AM-10:50 PM OPL 103 <http://www.wfu.edu/~natalie/f12phy711/>

Instructor: Natalie Holzwarth Phone:758-5510 Office:300 OPL e-mail:natalie@wfu.edu

Course schedule

(Preliminary schedule -- subject to frequent adjustment.)

| Date | F&W Reading | Topic | Assignment |
|------------------|-------------|--|------------|
| 1 Wed, 8/29/2012 | Chap. 1 | Review of basic principles; Scattering theory | #1 |
| 2 Fri, 8/31/2012 | Chap. 1 | Scattering theory continued | #2 |
| 3 Mon, 9/03/2012 | Chap. 1 | Scattering theory continued | #3 |
| 4 Wed, 9/05/2012 | Chap. 1 & 2 | Scattering theory/Accelerated coordinate frame | #4 |
| 5 Fri, 9/07/2012 | Chap. 2 | Accelerated coordinate frame | #5 |

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

2

Special seminar today: 11-11:50 AM Olin 103

GROWTH OF SILICENE

Professors Hamid Oughaddou^{1,2} and Abdelkader Kara³

¹Institut des Sciences Moléculaires d'Orsay, ISMO-CNRS, Université Paris-Sud, 91405 Orsay-France

²Département de physique, Université de Cergy-Pontoise, 95000 Cergy-Pontoise, France

³Department of Physics, University of Central Florida, Orlando, FL 32116, USA

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

3

Application of Newton's laws in a coordinate system which has an angular velocity ω and linear acceleration $\left(\frac{d^2\mathbf{a}}{dt^2}\right)_{in}$

Newton's laws; Let \mathbf{r} denote the position of particle of mass m :

$$m \left(\frac{d^2 \mathbf{r}}{dt^2} \right)_{inertial} = \mathbf{F}_{ext}$$

$$m \left(\frac{d^2 \mathbf{r}}{dt^2} \right)_{body} = \mathbf{F}_{ext} - m \left(\frac{d^2 \mathbf{a}}{dt^2} \right)_{inertial} - 2m\boldsymbol{\omega} \times \left(\frac{d\mathbf{r}}{dt} \right)_{body} - m \frac{d\boldsymbol{\omega}}{dt} \times \mathbf{r} - m\boldsymbol{\omega} \times \boldsymbol{\omega} \times \mathbf{r}$$

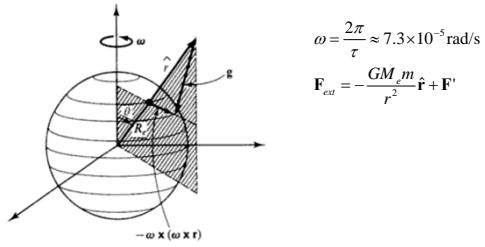

Coriolis force **Centrifugal force**

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

4

Motion on the surface of the Earth:

$$m \left(\frac{d^2 \mathbf{r}}{dt^2} \right)_{\text{earth}} = -\frac{GM_m}{r^2} \hat{\mathbf{r}} + \mathbf{F}' - 2m\boldsymbol{\omega} \times \left(\frac{d\mathbf{r}}{dt} \right)_{\text{earth}} - m \frac{d\boldsymbol{\omega}}{dt} \times \mathbf{r} - m\boldsymbol{\omega} \times \boldsymbol{\omega} \times \mathbf{r}$$

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

5

Non-inertial effects on effective gravitational “constant”

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

6

Foucault pendulum http://www.si.edu/Encyclopedia_SI/nmah/pendulum.htm

The Foucault pendulum was displayed for many years in the Smithsonian's National Museum of American History. It is named for the French physicist Jean Foucault who first used it in 1851 to demonstrate the rotation of the earth.

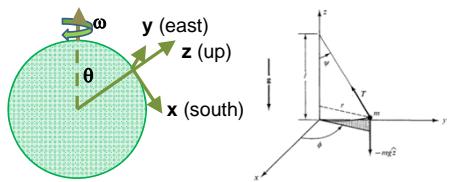

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

7

Equation of motion on Earth's surface

$$m \left(\frac{d^2 \mathbf{r}}{dt^2} \right)_{\text{earth}} = -\frac{GM_e m}{r^2} \hat{\mathbf{r}} + \mathbf{F}' - 2m\boldsymbol{\omega} \times \left(\frac{d\mathbf{r}}{dt} \right)_{\text{earth}} - m \frac{d\boldsymbol{\omega}}{dt} \times \mathbf{r} - m\boldsymbol{\omega} \times \boldsymbol{\omega} \times \mathbf{r}$$

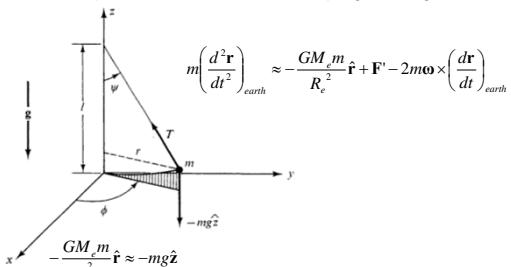

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

8

Foucault pendulum continued – keeping leading terms:

$$\begin{aligned} m \left(\frac{d^2 \mathbf{r}}{dt^2} \right)_{\text{earth}} &\approx -\frac{GM_e m}{R_e^2} \hat{\mathbf{r}} + \mathbf{F}' - 2m\boldsymbol{\omega} \times \left(\frac{d\mathbf{r}}{dt} \right)_{\text{earth}} \\ -\frac{GM_e m}{r^2} \hat{\mathbf{r}} &\approx -mg\hat{\mathbf{z}} \end{aligned}$$

$$\mathbf{F}' \approx -T \sin \psi \cos \phi \hat{\mathbf{x}} - T \sin \psi \sin \phi \hat{\mathbf{y}} + T \cos \psi \hat{\mathbf{z}}$$

$$\boldsymbol{\omega} \approx -\omega \sin \phi \hat{\mathbf{x}} + \omega \cos \phi \hat{\mathbf{z}}$$

$$\boldsymbol{\omega} \times \left(\frac{d\mathbf{r}}{dt} \right)_{\text{earth}} \approx \boldsymbol{\omega} \left(-\dot{y} \cos \theta \hat{\mathbf{x}} + (\dot{x} \cos \theta + \dot{z} \sin \theta) \hat{\mathbf{y}} - \dot{y} \cos \theta \hat{\mathbf{z}} \right)$$

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

9

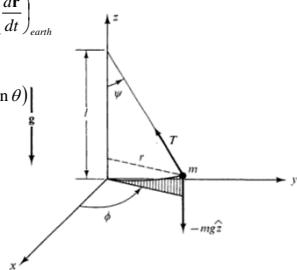

Foucault pendulum continued – keeping leading terms:

$$m \left(\frac{d^2 \mathbf{r}}{dt^2} \right)_{\text{earth}} \approx -\frac{GM_e m}{R_e^2} \hat{\mathbf{r}} + \mathbf{F}' - 2m\omega \times \left(\frac{d\mathbf{r}}{dt} \right)_{\text{earth}}$$

$$m\ddot{x} \approx -T \sin \psi \cos \theta + 2m\omega \dot{y} \cos \theta$$

$$m\ddot{y} \approx -T \sin \psi \sin \phi - 2m\omega (\dot{x} \cos \theta + \dot{z} \sin \theta)$$

$$m\ddot{z} \approx T \cos \psi - mg + 2m\omega \dot{y} \cos \theta$$

Further approximation :

$$\psi \ll 1; \dot{z} \approx 0; T \approx mg$$

$$m\ddot{x} \approx -mg \sin \psi \cos \phi + 2m\omega \dot{y} \cos \theta$$

$$m\ddot{y} \approx -mg \sin \psi \sin \phi - 2m\omega \dot{x} \cos \theta$$

Also note that :

$$x \approx \ell \sin \psi \cos \phi$$

$$y \approx \ell \sin \psi \sin \phi$$

9/7/2012

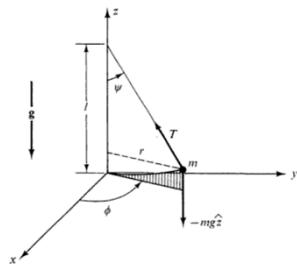

PHY 711 Fall 2012 -- Lecture 5

10

Foucault pendulum continued – coupled equations:

$$\ddot{x} \approx -\frac{g}{\ell} x + 2\omega \cos \theta \dot{y}$$

$$\ddot{y} \approx -\frac{g}{\ell} y - 2\omega \cos \theta \dot{x}$$

Try to find a solution of the form :

$$x(t) = X e^{-i\omega t}, \quad y(t) = Y e^{-i\omega t}$$

Denote $\omega_{\perp} \equiv \omega \cos \theta$

$$\begin{pmatrix} -q^2 + \frac{g}{\ell} & i2\omega_{\perp} q \\ -i2\omega_{\perp} q & -q^2 + \frac{g}{\ell} \end{pmatrix} \begin{pmatrix} X \\ Y \end{pmatrix} = 0$$

Non-trivial solutions :

$$q_{\pm} = \alpha \pm \beta \equiv \omega_{\perp} \pm \sqrt{\omega_{\perp}^2 + \frac{g}{\ell}}$$

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

11

Foucault pendulum continued – coupled equations:

Solution continued :

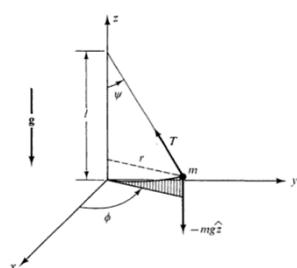

$$x(t) = X e^{-i\omega t}, \quad y(t) = Y e^{-i\omega t}$$

$$\begin{pmatrix} -q^2 + \frac{g}{\ell} & i2\omega_{\perp} q \\ -i2\omega_{\perp} q & -q^2 + \frac{g}{\ell} \end{pmatrix} \begin{pmatrix} X \\ Y \end{pmatrix} = 0$$

Non-trivial solutions :

$$q_{\pm} = \alpha \pm \beta \equiv \omega_{\perp} \pm \sqrt{\omega_{\perp}^2 + \frac{g}{\ell}}$$

Amplitude relationship : $X = iY$

General solution with complex amplitudes C and D :

$$x(t) = \operatorname{Re} \{ C e^{-i(\alpha+\beta)t} + iD e^{-i(\alpha-\beta)t} \}$$

$$y(t) = \operatorname{Re} \{ C e^{-i(\alpha+\beta)t} + D e^{-i(\alpha-\beta)t} \}$$

9/7/2012

PHY 711 Fall 2012 -- Lecture 5

12

General solution with complex amplitudes C and D :

$$x(t) = \operatorname{Re} \{ iCe^{-i(\alpha+\beta)t} + iDe^{-i(\alpha-\beta)t} \}$$

$$y(t) = \operatorname{Re} \{ Ce^{-i(\alpha+\beta)t} + De^{-i(\alpha-\beta)t} \}$$

$$q_{\pm} = \alpha \pm \beta \equiv \omega_{\perp} \pm \sqrt{\omega_{\perp}^2 + \frac{g}{\ell}}$$

$$\omega_{\perp} \approx 7 \times 10^{-5} \cos \theta \text{ rad/s} \ll \sqrt{\frac{g}{\ell}}$$

9/7/2012

PHY 711 Fall 2012 – Lecture 5
