

**PHY 711 Classical Mechanics and  
Mathematical Methods  
10-10:50 AM MWF Olin 103**

**Plan for Lecture 1:**

- 1. Welcome & overview**
- 2. Class structure & announcements**
- 3. Introduction to algebraic manipulation software – Maple and Mathematica**

➤ **Start reading Chap. 1 for next time**

**WFU Physics Colloquium**

**TITLE:** Analog of Black Hole Evaporation in Bose-Einstein Condensates

**SPEAKER:** Dr. Alessandro Fabbri,

Centro Studi e Ricerche Enrico Fermi,  
Rome, Italy

**TIME:** Wednesday August 27, 2014 at 4:00 PM

**PLACE:** Room 101 Olin Physical Laboratory

Refreshments will be served at 3:30 PM in the Olin Lounge. All interested persons are cordially invited to attend.

**ABSTRACT**

The Hawking effect from black holes is a milestone in modern Theoretical Physics, but its detection in the astrophysical context is unlikely. William Unruh showed that it is possible to look for the analog of the Hawking effect in condensed matter systems. We shall review the status of ongoing experiments and focus on the possibility of observing it in Bose-Einstein condensates through correlation measurements.

SIGNIFICANT NAMES IN MECHANICS  
AND MATHEMATICAL PHYSICS

Isaac Newton (1642–1727)  
 Daniel Bernoulli (1700–1782)  
 Leonhard Euler (1707–1783)  
 Jean Le Rond d'Alembert (1717–1783)  
 Joseph Louis Lagrange (1736–1813)  
 Pierre Simon de Laplace (1749–1827)  
 Adrien Marie Legendre (1752–1833)  
 Jean Baptiste Joseph Fourier (1768–1830)  
 Karl Friedrich Gauss (1777–1855)  
 Siméon-Denis Poisson (1781–1842)  
 Friedrich Wilhelm Bessel (1784–1846)  
 Augustin-Louis Cauchy (1789–1857)  
 George Green (1793–1841)  
 Carl Gustav Jacob Jacobi (1804–1851)  
 William Rowan Hamilton (1805–1865)  
 Joseph Liouville (1809–1882)  
 George Gabriel Stokes (1819–1903)  
 Hermann Ludwig Ferdinand Helmholtz (1821–1894)  
 Gustav Robert Kirchhoff (1824–1887)  
 William Thomson (Lord Kelvin) (1824–1907)  
 Georg Friedrich Bernhard Riemann (1826–1866)  
 John William Strutt (Lord Rayleigh) (1842–1919)

## Topics

## Classical Mechanics

- Scattering theory
- Accelerated reference frames
- Calculus of variation
- Lagrangian formalism
- Hamiltonian formalism
- Small oscillations
- Wave equations
- Rigid rotations
- Physics of fluids
- Sound waves
- Surface waves
- Heat conduction
- Viscous fluids

8/27/2014

PHY 711 Fall 2014 -- Lecture 1

5

## Math Methods

- Solutions methods for differential equations
- Matrix properties; eigenvalues and eigenvectors
- Contour integration
- Fourier transforms
- Laplace transforms
- Use of Maple and/or Mathematica

### PHY 711 Classical Mechanics and Mathematical Methods

MWF 10 AM-10:50 PM OPL 103 <http://www.wfu.edu/~natalie/f14phy711/>

Instructor: [Natalie Holzwarth](#) Phone: 758-5610 Office: 300 OPL e-mail: [natalie@wfu.edu](mailto:natalie@wfu.edu)

#### General Information

This course is a one semester survey of Classical Mechanics and Mathematical Methods at the graduate level, using the textbook: **Theoretical Mechanics of Particles and Continua** by Alexander L. Fetter and John Dirk Walecka (McGraw-Hill, 1980) (now published by Dover) -- F&W.

It is likely that your grade for the course will depend upon the following factors:

Problem sets*	40%
<a href="#">Computational project</a>	20%
Exams	40%

\*In general, there will be a new assignment after each lecture, so that for optimal learning, it would be best to complete each assignment before the next scheduled lecture. According to the honor system, all work submitted for grading purposes should represent the student's own best efforts.

#### Computational Project

The purpose of this assignment is to provide an opportunity for you to study a topic of your choice in greater depth. The general guideline for your choice of project is that it should have something to do with classical mechanics, and there should be some degree of computation associated with the project. The completed project will include a short write-up and a ~20min presentation to the class. You may design your own project or use one of the following list (which will be updated throughout the term).

- Consider a scattering experiment in which you specify the spherically symmetric interaction potential  $V(r)$ . Write a computer program (using your favorite language) to evaluate the scattering cross section for your system. (Depending on your choice, you may wish to present your results either in the center-of-mass or lab frames of reference.)
- Consider the Foucault Pendulum. Analyze the equations of motion including both the horizontal and vertical motions. You can either solve the equations exactly or use perturbation theory. Compare the effects of the vertical motion to the effects of air friction.
- Consider a model system of 3 or more interacting particles with appropriate initial conditions, using numerical methods to find out how the system evolves in time and space.
- Examine the normal modes of vibration for a model system with 3 or more masses in 2 or 3 dimensions.
- Analyze the soliton equations beyond what was covered in class.

#### PHY 711 - Assignment #1

08/27/2014

1. Use maple or mathematica to plot the function

$$f(x) = e^{-x^2}$$

and to evaluate the integral

$$\int_0^5 f(x) dx.$$
