

**PHY 711 Classical Mechanics and  
Mathematical Methods  
10-10:50 AM MWF in Olin 103**

**Notes for Lecture 23: Chap. 7  
& App. A-D (F&W)**

**Generalization of the one dimensional wave equation →  
various mathematical problems and techniques including:**

- 1. Fourier transforms
- 2. Laplace transforms
- 3. Complex variables
- 4. Contour integrals

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

1

In this lecture, we will focus on the mathematics of complex variables.

2

No new homework while working on mid term exam.

10/20/2021

**PHY 711 – Homework # 16**

Read Appendix A of **Fetter and Walecka**.

1. Assume that  $a > 0$  and  $b > 0$ ; use contour integration methods to evaluate the integral:

$$\int_{-\infty}^{\infty} \frac{e^{iax}}{x^2 + b^2} dx.$$

Note that you may use Maple, Mathematica, or other software to evaluate this integral, but full credit will be earned by using the contour integration methods.

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

3

Schedule for Thursday 10/21/2021 --

**Thurs. Oct. 21, 2021** – Yan Li, WFU graduate student – Ph. D. Defense: “First Principles Investigations of Electrolyte Materials in All-Solid-State Batteries” – 9AM-10AM (**note special time**) – mentor: Professor Natalie Holzwarth  
ZSR auditorium and via zoom  
(reception following defense ~ 11:15 AM in Olin Lobby)

**Thurs. Oct. 21, 2021** – Professor Jarrett Lancaster, High Point University, NC – “Simulating Quantum Dynamics with Quantum Computers” (host: D. Kim-Shapiro)

4 PM in Olin 101 and via zoom  
(reception prior to colloquium at 3:30 PM in Olin Lobby)

## Introduction to complex variables

1. Basic properties
2. Notion of an analytic complex function
3. Cauchy integral theory
4. Analytic functions and functions with poles
5. Evaluating integrals of functions in the complex plane

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

5

We will review/introduce the basic ideas associated with complex variables.

## Complex numbers

$$i \equiv \sqrt{-1} \quad i^2 = -1$$

Define  $z = x + iy$

$$|z|^2 = zz^* = (x + iy)(x - iy) = x^2 + y^2$$

Polar representation

$$z = \rho(\cos\phi + i\sin\phi) = \rho e^{i\phi}$$

## Functions of complex variables

$$f(z) = \Re(f(z)) + i\Im(f(z)) \equiv u(x, y) + iv(x, y)$$

### Derivatives: Cauchy-Riemann equations

$$\frac{\partial f(z)}{\partial x} = \frac{\partial u(z)}{\partial x} + i \frac{\partial v(z)}{\partial x} \quad \frac{\partial f(z)}{\partial y} = \frac{\partial u(z)}{\partial y} + i \frac{\partial v(z)}{\partial y} = \frac{\partial v(z)}{\partial y} - i \frac{\partial u(z)}{\partial y}$$

$$\text{Argue that } \frac{df}{dz} = \frac{\partial f(z)}{\partial x} = \frac{\partial f(z)}{\partial y} \Rightarrow \frac{\partial u(z)}{\partial x} = \frac{\partial v(z)}{\partial y} \quad \text{and} \quad \frac{\partial v(z)}{\partial x} = -\frac{\partial u(z)}{\partial y}$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

6

First we consider the basic definitions and representations of a complex number. Then we consider a function of complex numbers. The Cauchy relationships follow from the notion that a function that is differentiable in the complex plane must have consistent partial derivatives along the real and imaginary axes.

## Analytic function

$f(z)$  is analytic if it is:

- continuous
- single valued
- its first derivative satisfies Cauchy-Rieman conditions

## Examples of analytic functions

$$e^z = e^{x+iy} = e^x \cos(y) + ie^x \sin(y)$$

$$\frac{\partial u}{\partial x} = e^x \cos(y) = \frac{\partial v}{\partial y} \quad \frac{\partial v}{\partial x} = e^x \sin(y) = -\frac{\partial u}{\partial y}$$

$$z^2 = (x + iy)^2 = (x^2 - y^2) + 2ixy$$

$$\frac{\partial u}{\partial x} = 2x = \frac{\partial v}{\partial y} \quad \frac{\partial v}{\partial x} = 2y = -\frac{\partial u}{\partial y}$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

7

Notion of an analytic function and an example that satisfies the conditions.

### Examples of non-analytic functions

Note that  $z = \rho e^{i\phi} = \rho e^{i\phi+i2\pi n}$  for any integer  $n$

$$\Rightarrow \ln z = \ln \rho + i(\phi + 2\pi n)$$

$\ln z$  is not analytic because it is multivalued

$$\Rightarrow z^\alpha = \rho^\alpha e^{i\alpha\phi} e^{i2\pi n\alpha}$$

$z^\alpha$  is not analytic for non-integer  $\alpha$   
because it is multivalued

Behavior of  $f(z) = \frac{1}{z^n}$  about the point  $z = 0$ :

For an integer  $n$ , consider

$$\oint \frac{1}{z^n} dz = \int_0^{2\pi} \frac{\rho e^{i\phi} id\phi}{\rho^n e^{in\phi}} = \rho^{1-n} \int_0^{2\pi} e^{i(1-n)\phi} id\phi = \begin{cases} 0 & n \neq 1 \\ 2\pi i & n = 1 \end{cases}$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

8

Examples of non-analytic functions. Special property of contour integrals about a function with a simple “pole”.

Behavior of  $f(z) = \frac{1}{z^n}$  about the point  $z = 0$ :

For an integer  $n$ , consider

$$\oint \frac{1}{z^n} dz = \int_0^{2\pi} \frac{\rho e^{i\phi} i d\phi}{\rho^n e^{in\phi}} = \rho^{1-n} \int_0^{2\pi} e^{i(1-n)\phi} i d\phi = \begin{cases} 0 & n \neq 1 \\ 2\pi i & n = 1 \end{cases}$$

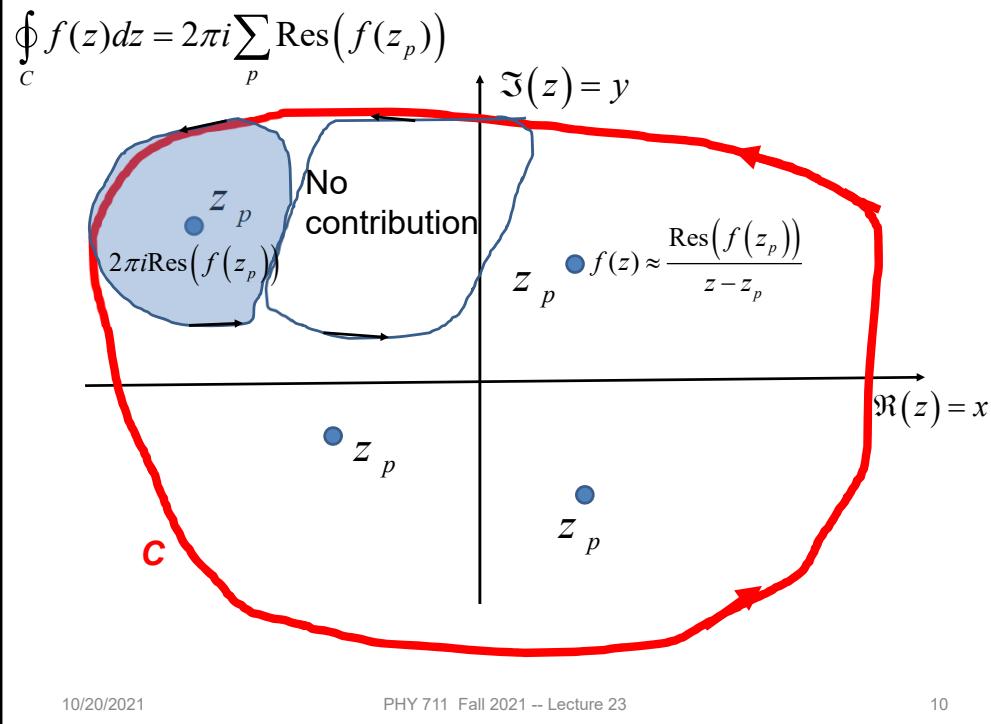

This observation helps us to focus on a special kind of singularity called a "pole"

For  $f(z)$  in the vicinity of  $z = z_p$ :  $f(z) \approx \frac{g(z_p)}{z - z_p}$

$$\text{Therefore: } \oint f(z) dz = 0 \quad \text{or} \quad \oint f(z) dz = g(z_p) \oint \frac{dz}{z - z_p} = 2\pi i g(z_p)$$

**Integration does  
not include  $z_p$**

**Integration does  
include  $z_p$**

Contributions to a closed contour from various contributions.

General formula for determining residue:

$$\text{Suppose that in the neighborhood of } z_p, f(z) \approx \frac{h(z)}{(z - z_p)^m} \underset{z \rightarrow z_p}{\equiv} \frac{\text{Res}(f(z_p))}{z - z_p}$$

Since  $h(z) \equiv (z - z_p)^m f(z)$  is analytic near  $z_p$ , we can make a Taylor expansion

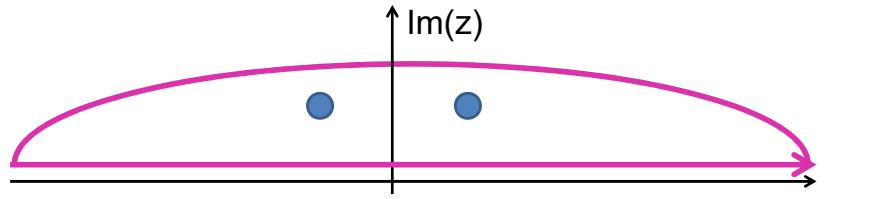

$$\text{about } z_p : \quad h(z) \approx h(z_p) + (z - z_p) \frac{dh(z_p)}{dz} + \dots + \frac{(z - z_p)^{m-1}}{(m-1)!} \frac{d^{m-1}h(z_p)}{dz^{m-1}} + \dots$$

$$\Rightarrow \text{Res}(f(z_p)) = \lim_{z \rightarrow z_p} \left\{ \frac{1}{(m-1)!} \frac{d^{m-1}((z - z_p)^m f(z))}{dz^{m-1}} \right\}$$

In the following examples  $m=1$

## Residue theorem

Example:  $\int_{-\infty}^{\infty} \frac{x^2}{1+x^4} dx = \int_{-\infty}^{\infty} \frac{x^2}{1+x^4} dx + 0 = \oint \frac{z^2}{1+z^4} dz$

$$1+z^4 = (z - e^{i\pi/4})(z - e^{3i\pi/4})(z - e^{-i\pi/4})(z - e^{-3i\pi/4})$$

$$\oint \frac{z^2}{1+z^4} dz = 2\pi i \left( \text{Res}(z_p = e^{i\pi/4}) + \text{Res}(z_p = e^{3i\pi/4}) \right)$$

$$\text{Res}(z_p = e^{i\pi/4}) = \frac{e^{i\pi/4}}{4i} \quad \text{Res}(z_p = e^{3i\pi/4}) = -\frac{e^{3i\pi/4}}{4i}$$

$$\oint \frac{z^2}{1+z^4} dz = 2\pi i \left( \frac{e^{i\pi/4}}{4i} - \frac{e^{3i\pi/4}}{4i} \right) = \frac{\pi}{2} \left( \left( \sqrt{\frac{1}{2}} + i\sqrt{\frac{1}{2}} \right) - \left( -\sqrt{\frac{1}{2}} + i\sqrt{\frac{1}{2}} \right) \right) = \frac{\pi}{\sqrt{2}}$$

Note:  
 $m=1$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

12

Example of a contour integral using the residue theorem.

Some details:

$$f(z) = \frac{z^2}{1+z^4}$$

Note that:  $e^{i\pi} = -1 = e^{-i\pi}$

$$e^{-3i\pi/4} = e^{i\pi/4-i\pi} = -e^{i\pi/4}$$

$$\begin{aligned}\text{Res}\left(f(z = e^{i\pi/4})\right) &= \frac{\left(e^{i\pi/4}\right)^2}{\left(e^{i\pi/4} - e^{3i\pi/4}\right)\left(e^{i\pi/4} - e^{-i\pi/4}\right)\left(e^{i\pi/4} - e^{-3i\pi/4}\right)} \\ &= \frac{e^{i\pi/2}}{\left(e^{i\pi/4} + e^{-i\pi/4}\right)\left(e^{i\pi/4} - e^{-i\pi/4}\right)\left(e^{i\pi/4} + e^{i\pi/4}\right)} \\ &= \frac{e^{i\pi/4}}{2(i - (-i))} = \frac{e^{i\pi/4}}{4i}\end{aligned}$$

Question – Could we have chosen the contour in the lower half plane?

- a. Yes
- b. No

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

13

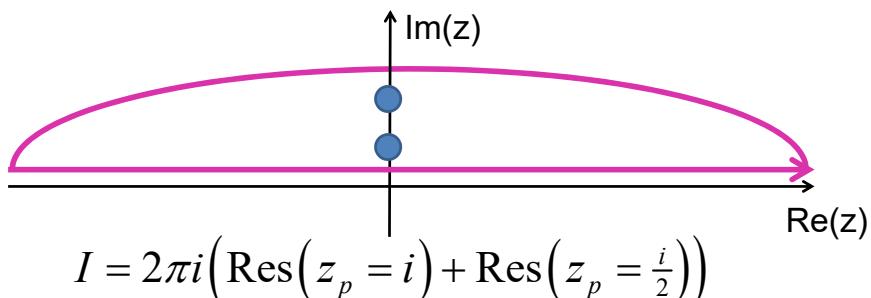

Some details.

Another example:  $I = \int_0^\infty \frac{\cos(ax)}{4x^4 + 5x^2 + 1} dx$ .

$$\int_0^\infty \frac{\cos(ax)}{4x^4 + 5x^2 + 1} dx = \frac{1}{2} \int_{-\infty}^\infty \frac{e^{iax}}{4x^4 + 5x^2 + 1} dx = \frac{1}{2} \oint \frac{e^{iaz}}{4z^4 + 5z^2 + 1} dz$$

$$4z^4 + 5z^2 + 1 = 4(z - i)(z - \frac{i}{2})(z + i)(z + \frac{i}{2})$$

Note:  
 $m=1$

Another example.

$$\begin{aligned}
\int_0^\infty \frac{\cos(ax)}{4x^4 + 5x^2 + 1} dx &= \frac{1}{2} \oint \frac{e^{iaz}}{4z^4 + 5z^2 + 1} dz \\
&= 2\pi i \left( \text{Res}(z_p = i) + \text{Res}(z_p = \frac{i}{2}) \right) \\
&= \frac{\pi}{6} \left( -e^{-a} + 2e^{-a/2} \right)
\end{aligned}$$

Question – Could we have chosen the contour in the lower half plane?

- a. Yes
- b. No

Note that for  $a > 0$  and  $z_I > 0$

in the lower half plane:  $e^{iaz} = e^{iaz_R} e^{az_I}$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

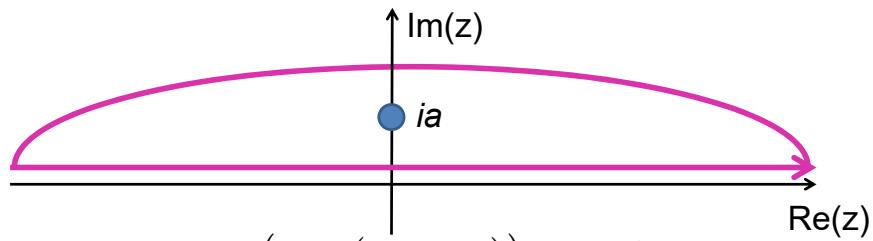

15

Some details.

Another example:  $I = \int_{-\infty}^{\infty} \frac{x \sin kx}{x^2 + a^2} dx$  for  $k > 0$  and  $a > 0$

$$\int_{-\infty}^{\infty} \frac{x \sin kx}{x^2 + a^2} dx = \frac{1}{i} \int_{-\infty}^{\infty} \frac{xe^{ikx}}{x^2 + a^2} dx = \frac{1}{i} \oint \frac{ze^{izk}}{z^2 + a^2} dz$$

$$z^2 + a^2 = (z - ia)(z + ia)$$

$$I = 2\pi i \left( \text{Res}(z_p = ia) \right) = \pi e^{-ka}$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

16

Another example

Some details --

$$\begin{aligned}\int_{-\infty}^{\infty} \frac{x \sin kx}{x^2 + a^2} dx &= \frac{1}{i} \int_{-\infty}^{\infty} \frac{xe^{ikx}}{x^2 + a^2} dx = \frac{1}{i} \oint \frac{ze^{ikz}}{z^2 + a^2} dz \\ z^2 + a^2 &= (z - ia)(z + ia) \\ \frac{1}{i} \oint \frac{ze^{ikz}}{z^2 + a^2} dz &= 2\pi i \frac{1}{i} \lim_{z \rightarrow ia} \left( (z - ia) \frac{ze^{ikz}}{z^2 + a^2} \right) \\ &= 2\pi i \frac{1}{i} \frac{iae^{-ka}}{2ia} = \pi e^{-ka}\end{aligned}$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

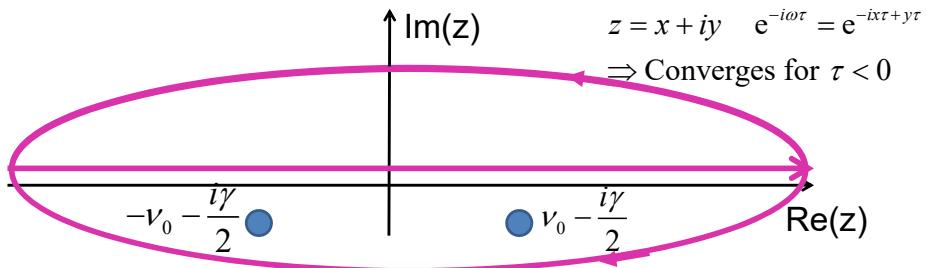

17

More details.

From the Drude model of dielectric response --

$$G(\tau) = \frac{\omega_p^2}{2\pi} \int_{-\infty}^{\infty} d\omega \frac{e^{-i\omega\tau}}{\omega_0^2 - \omega^2 - i\gamma\omega} \quad \text{where } \omega_p, \omega_0, \text{ and } \gamma \text{ are positive constants}$$

Upper hemisphere:

Lower hemisphere:

$$\nu_0 \equiv \sqrt{\omega_0^2 - \frac{\gamma^2}{4}}$$

$$z = x - iy \quad e^{-i\omega\tau} = e^{-ix\tau - y\tau} \\ \Rightarrow \text{Converges for } \tau > 0$$

From the Drude model of dielectric response -- continued --

$$G(\tau) = \frac{\omega_p^2}{2\pi} \int_{-\infty}^{\infty} d\omega \frac{e^{-i\omega\tau}}{\omega_0^2 - \omega^2 - i\gamma\omega} \quad \text{where } \omega_p, \omega_0, \text{ and } \gamma \text{ are positive constants}$$

$$G(\tau) = \omega_p^2 \begin{cases} 0 & \text{for } \tau < 0 \\ e^{-\gamma\tau/2} \frac{\sin \nu_0 \tau}{\nu_0} & \text{for } \tau > 0 \end{cases}$$

Another example from the Drude model.

Cauchy integral theorem for analytic function  $f(z)$ :

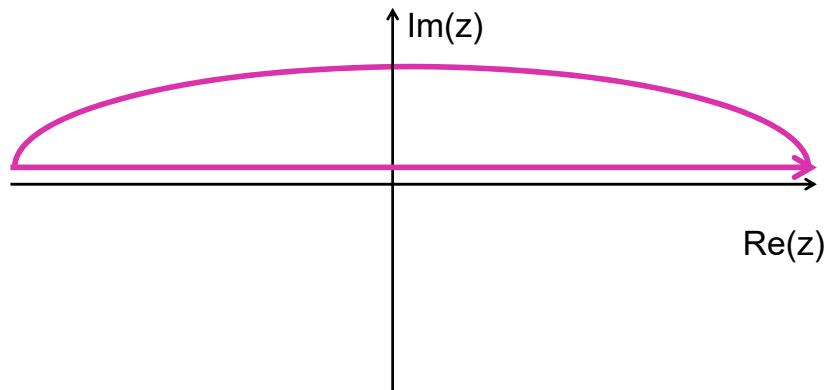

$$f(z) = \frac{1}{2\pi i} \oint_C \frac{f(z')}{z' - z} dz'.$$

Another useful theorem from Cauchy.

Example

Suppose  $f(|z| \rightarrow \infty) = 0$  and for  $z = x$ :

$$f(x) = a(x) + ib(x)$$

10/20/2021

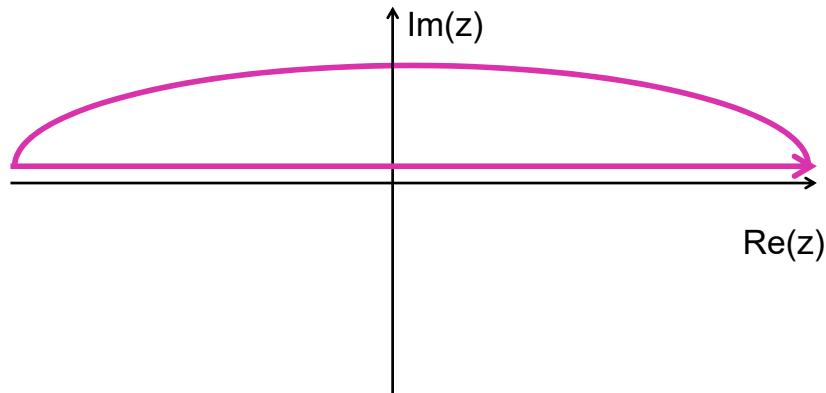

PHY 711 Fall 2021 -- Lecture 23

21

Considering real and imaginary parts.

Example -- continued

$$f(z) = \frac{1}{2\pi i} \oint \frac{f(z')}{z' - z} dz' \quad \text{where } f(x) = a(x) + ib(x)$$

$$a(x) + ib(x) = \frac{1}{2\pi i} \int_{-\infty}^{\infty} \frac{a(x') + ib(x')}{x' - x} dx' + 0$$

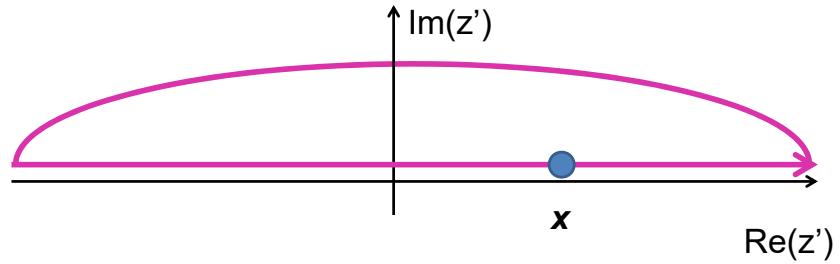

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

22

Real and imaginary parts for Cauchy's integral relation.

Example -- continued

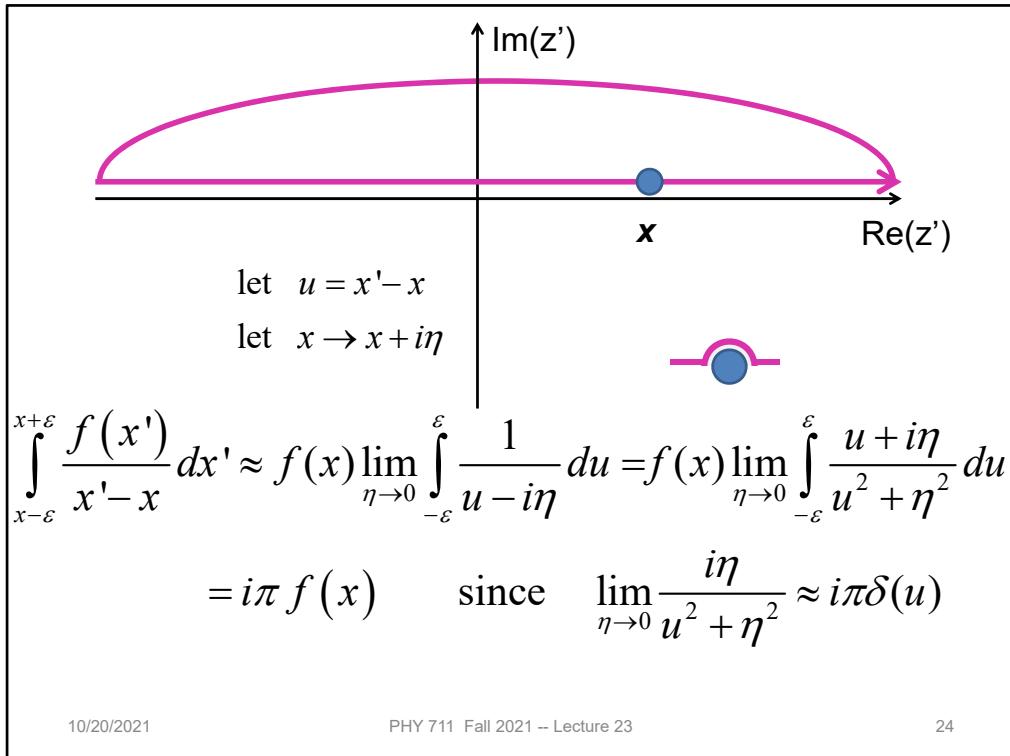

$$\begin{aligned} \int_{-\infty}^{\infty} \frac{f(x')}{x'-x} dx' &= \int_{-\infty}^{x-\varepsilon} \frac{f(x')}{x'-x} dx' + \int_{x+\varepsilon}^{\infty} \frac{f(x')}{x'-x} dx' + \int_{x-\varepsilon}^{x+\varepsilon} \frac{f(x')}{x'-x} dx' \\ &= P \int_{-\infty}^{\infty} \frac{f(x')}{x'-x} dx' + i\pi f(x) \end{aligned}$$

PHY 711 Fall 2021 -- Lecture 23

23

Detail of how to evaluate the point  $x=x'$  in terms of the principal parts integral.

10/20/2021

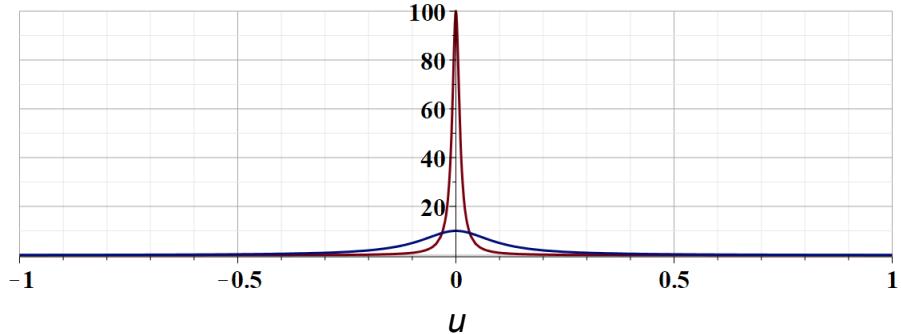

PHY 711 Fall 2021 -- Lecture 23

24

Some details.

More details --

$$\lim_{\eta \rightarrow 0} \frac{\eta}{u^2 + \eta^2} \approx \pi \delta(u)$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

25

Justification of the delta function result.

Example -- continued

$$\int_{-\infty}^{\infty} \frac{f(x')}{x'-x} dx' = \int_{-\infty}^{x-\varepsilon} \frac{f(x')}{x'-x} dx' + \int_{x+\varepsilon}^{\infty} \frac{f(x')}{x'-x} dx' + \int_{x-\varepsilon}^{x+\varepsilon} \frac{f(x')}{x'-x} dx'$$

$$= P \int_{-\infty}^{\infty} \frac{f(x')}{x'-x} dx' + i\pi f(x)$$

$$a(x) + ib(x) = \frac{P}{2\pi i} \int_{-\infty}^{\infty} \frac{a(x') + ib(x')}{x'-x} dx' + \frac{\pi i}{2\pi i} (a(x) + ib(x))$$

$$\Rightarrow a(x) = \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x'-x} dx' \quad b(x) = -\frac{P}{\pi} \int_{-\infty}^{\infty} \frac{a(x')}{x'-x} dx'$$

Kramers-Kronig relationships

10/20/2021

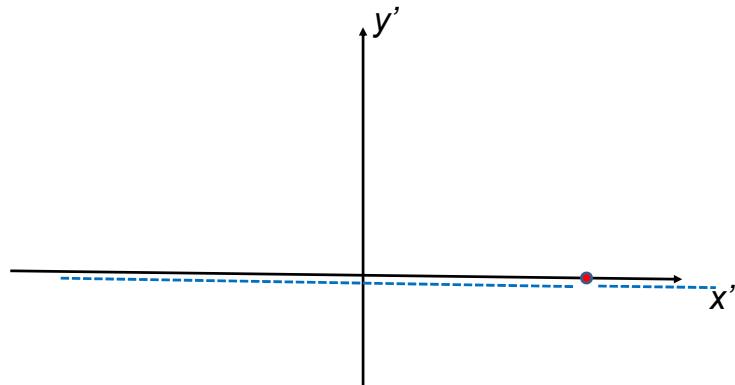

PHY 711 Fall 2021 -- Lecture 23

26

Final result relating real and imaginary parts of complex function.

Comment on evaluating principal parts integrals

$$a(x) = \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x' - x} dx' = \lim_{\epsilon \rightarrow 0} \left( \frac{1}{\pi} \int_{-\infty}^{x-\epsilon} \frac{b(x')}{x' - x} dx' + \frac{1}{\pi} \int_{x+\epsilon}^{\infty} \frac{b(x')}{x' - x} dx' \right)$$

10/20/2021

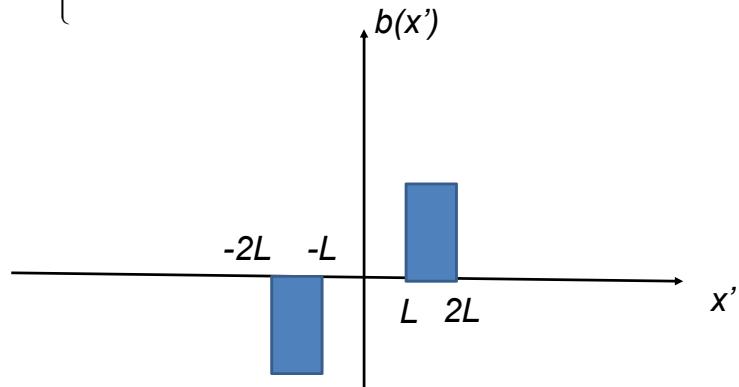

PHY 711 Fall 2021 -- Lecture 23

27

Some details.

Example:

$$b(x') = \begin{cases} 0 & \text{for } x' < -2L, \quad -L < x' < L, \quad x' > 2L \\ B_0 & \text{for } L < x' < 2L \\ -B_0 & \text{for } -2L < x' < -L \end{cases}$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

28

Simple example for complex function.

Example:

$$b(x') = \begin{cases} 0 & \text{for } x' < -2L, \quad -L < x' < L, \quad x' > 2L \\ B_0 & \text{for } L < x' < 2L \\ -B_0 & \text{for } -2L < x' < -L \end{cases}$$

$$a(x) = \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x' - x} dx' = \lim_{\epsilon \rightarrow 0} \left( \frac{1}{\pi} \int_{-\infty}^{x-\epsilon} \frac{b(x')}{x' - x} dx' + \frac{1}{\pi} \int_{x+\epsilon}^{\infty} \frac{b(x')}{x' - x} dx' \right)$$

For  $x < -2L$  or  $x > 2L$   $-L < x < L$ :

$$a(x) = \frac{-B_0}{\pi} \int_{-2L}^{-L} \frac{dx'}{x' - x} + \frac{B_0}{\pi} \int_L^{2L} \frac{dx'}{x' - x}$$

$$= \frac{-B_0}{\pi} \ln \left( \left| \frac{x+L}{x+2L} \right| \right) + \frac{B_0}{\pi} \ln \left( \left| \frac{x-2L}{x-L} \right| \right) = \frac{B_0}{\pi} \ln \left( \left| \frac{x^2 - 4L^2}{x^2 - L^2} \right| \right)$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

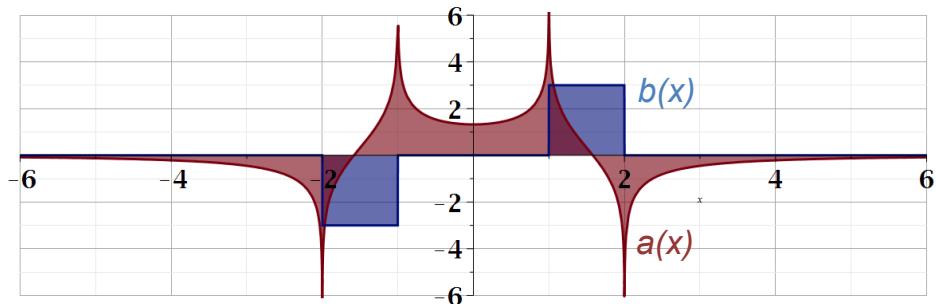

29

For given imaginary function, this is the form of the real function.

$$a(x) = \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x' - x} dx' = \lim_{\epsilon \rightarrow 0} \left( \frac{1}{\pi} \int_{-\infty}^{x-\epsilon} \frac{b(x')}{x' - x} dx' + \frac{1}{\pi} \int_{x+\epsilon}^{\infty} \frac{b(x')}{x' - x} dx' \right)$$

For our example:

$$a(x) = \frac{B_0}{\pi} \ln \left( \left| \frac{4L^2 - x^2}{L^2 - x^2} \right| \right)$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

30

Summary of results.

## Summary

For a function  $f(x)$ , analytic along the real line:

$$f(x) = \Re(f(x)) + i\Im(f(x)) = a(x) + ib(x)$$

$$\Rightarrow a(x) = \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x' - x} dx', \quad b(x) = -\frac{P}{\pi} \int_{-\infty}^{\infty} \frac{a(x')}{x' - x} dx'$$

Example:

$$f(x) = \frac{1}{x+i} \quad a(x) = \frac{x}{x^2+1} \quad b(x) = -\frac{1}{x^2+1}$$

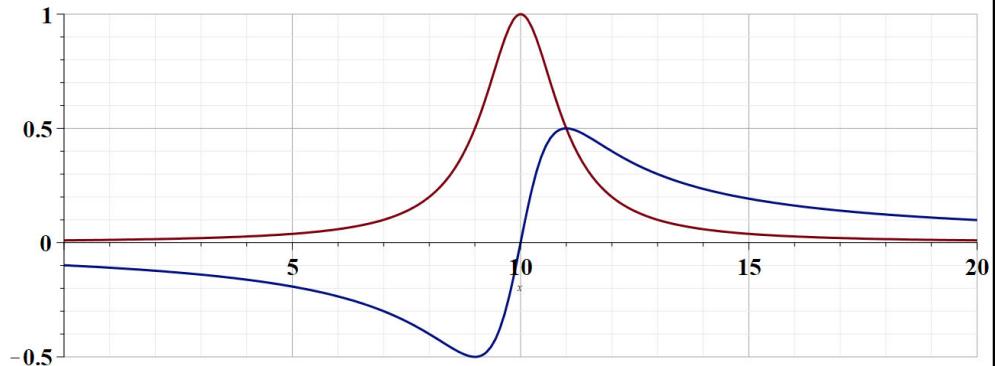

Check:

$$\frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x' - x} dx' = -\frac{P}{\pi} \int_{-\infty}^{\infty} \frac{1}{(x' - x)(x'^2 + 1)} dx' \stackrel{?}{=} \frac{x}{x^2 + 1} = a(x)$$

Summary.

$$a(\omega) = \frac{\omega - 10}{(\omega - 10)^2 + 1}$$

$$b(\omega) = \frac{1}{(\omega - 10)^2 + 1}$$

10/20/2021

PHY 711 Fall 2021 -- Lecture 23

32

**Continued:**

$$\begin{aligned}
 \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x'-x} dx' &= -\frac{P}{\pi} \int_{-\infty}^{\infty} \frac{1}{(x'-x)(x'^2+1)} dx' \\
 &= -\frac{P}{\pi} \int_{-\infty}^{\infty} \left( \frac{1}{(x'-x)(x'^2+1)} - \frac{1}{(x'-x)(x^2+1)} \right) dx' - \frac{1}{(x^2+1)} \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{1}{x'-x} dx' \\
 &= -\frac{P}{\pi} \int_{-\infty}^{\infty} \left( \frac{x^2 - x'^2}{(x'-x)(x'^2+1)(x^2+1)} \right) dx' - \frac{1}{(x^2+1)} \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{1}{x'-x} dx' \\
 &= \frac{P}{\pi} \int_{-\infty}^{\infty} \left( \frac{x+x'}{(x'^2+1)(x^2+1)} \right) dx' - \frac{1}{(x^2+1)} \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{1}{x'-x} dx'
 \end{aligned}$$

$$\text{Note that: } \int_{x+\epsilon}^X \frac{1}{x'-x} dx' = \ln(X-x) - \ln(\epsilon) = \ln\left(\frac{X-x}{\epsilon}\right)$$

$$\int_{-X}^{x-\epsilon} \frac{1}{x'-x} dx' = -\ln(-X-x) + \ln(-\epsilon) = -\ln\left(\frac{X+x}{\epsilon}\right)$$

$$\frac{P}{\pi} \int_{-\infty}^{\infty} \frac{1}{x'-x} dx' = \lim_{X \rightarrow \infty} \ln\left(\frac{X-x}{X+x}\right) = 0 \quad \frac{P}{\pi} \int_{-\infty}^{\infty} \frac{1}{x'^2+1} dx' = 1$$

$$\frac{P}{\pi} \int_{-\infty}^{\infty} \frac{b(x')}{x'-x} dx' = \frac{x}{x^2+1} = a(x)$$
