

PHY 114 A General Physics II
11 AM-12:15 PM TR Olin 101

Plan for Lecture 17 (Chapter 34):

Electromagnetic Waves

- 1. Maxwell's equations & their solutions**
- 2. Electromagnetic energy and their spectral distribution**
- 3. Review of Chapters 29-34**

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 1

Remember to send in your chapter reading questions...

11	03/01/2012	Magnetic fields	29.1-29.6	29.5, 29.12, 29.42	03/06/2012
12	03/06/2012	Magnetic field sources	30.1-30.6	30.5, 30.21, 30.29	03/08/2012
13	03/08/2012	Faraday's law	31.1-31.5	31.12, 31.23, 31.40	03/20/2012
	03/13/2012	No class (Spring Break)			
	03/15/2012	No class (Spring Break)			
14	03/20/2012	Induction and AC circuits	32.1-32.6	32.4, 32.20, 32.43	03/22/2012
15	03/22/2012	AC circuits	33.1-33.9	33.8, 33.24, 33.71	03/27/2012
16	03/27/2012	Electromagnetic waves	34.1-34.3	34.3, 34.10, 34.13	03/29/2012
17	03/29/2012	Electromagnetic waves	34.4-34.7	34.22, 34.46, 34.57	04/03/2012
18	04/03/2012	Ray optics Evening exam	35.1-35.8	35.20, 35.27, 35.35	04/05/2012
19	04/05/2012	Image formation Evening exam	35.1-35.4	35.8, 35.31, 35.42	04/10/2012
20	04/10/2012	Image formation	35.5-35.10	35.52, 35.54, 35.64	04/12/2012

3rd exam (covering Chapters 29-34) is scheduled for evenings during the week of 4/2/2012.

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 2

April 2012 < >

	S	M	T	W	T	F	S
	25	26	27	28	29	30	31
3rd exam dates	1	2	3	4	5	6	7
	8	9	10	11	12	13	14
	15	16	17	18	19	20	21
	22	23	24	25	26	27	28
	29	30	1	2	3	4	5

You will be scheduled for one of these (based on email info) – probably in Olin 107 between 6-10 PM:

- Monday 4/2
- Tuesday 4/3
- Wednesday 4/4
- Thursday 4/5

Several people still need to email their preferred exam times.

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 3

Full Maxwell's equations

$$\oint \mathbf{E}(\mathbf{r}) \cdot d\mathbf{A} = \frac{Q_{in}}{\epsilon_0} \qquad \nabla \cdot \mathbf{E} = \frac{\rho}{\epsilon_0}$$

$$\oint \mathbf{B}(\mathbf{r}) \cdot d\mathbf{A} = 0 \qquad \nabla \cdot \mathbf{B} = 0$$

$$\int \mathbf{E}(\mathbf{r}) \cdot d\mathbf{s} = -\frac{d}{dt} \int \mathbf{B}(\mathbf{r}) \cdot d\mathbf{A} \qquad \nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

$$\oint \mathbf{B} \cdot d\mathbf{s} = \mu_0 I_{in} + \mu_0 \epsilon_0 \frac{d}{dt} \int \mathbf{E}(\mathbf{r}) \cdot d\mathbf{A} \qquad \nabla \times \mathbf{B} = \mu_0 \mathbf{J} + \mu_0 \epsilon_0 \frac{\partial \mathbf{E}}{\partial t}$$

3/29/2012 PHY 114 A, Spring 2012 – Lecture 16 4

Plane wave solution to Maxwell's equations, far from sources:

$\mathbf{E} = E_y \hat{j} \quad \mathbf{B} = B_z \hat{k}$

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t} \Rightarrow \frac{\partial E_y}{\partial x} = -\frac{\partial B_z}{\partial t}$$

$$\nabla \times \mathbf{B} = \mu_0 \epsilon_0 \frac{\partial \mathbf{E}}{\partial t} \Rightarrow -\frac{\partial B_z}{\partial x} = \mu_0 \epsilon_0 \frac{\partial E_y}{\partial t}$$

$$E_y = E_y(x,t) = E_{max} \cos(k(x-ct))$$

$$B_z = B_z(x,t) = \frac{E_{max}}{c} \cos(k(x-ct))$$

3/29/2012 PHY 114 A, Spring 2012 – Lecture 16 5

Plane wave solution to Maxwell's equations, far from sources:

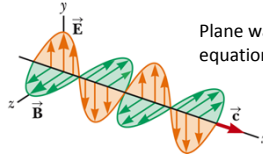

$E_y = E_y(x,t) = E_{max} \cos(k(x-ct))$
 $B_z = B_z(x,t) = \frac{E_{max}}{c} \cos(k(x-ct))$

Which of the following changes in the above solution would **no longer** represent E-M waves:

- cos \leftrightarrow sin
- Change value of E_{max}
- Change value of k
- Change value of c
- All of the above

3/29/2012 PHY 114 A, Spring 2012 – Lecture 16 6

Plane wave solution to Maxwell's equations, far from sources:

$$E_y = E_y(x, t) = E_{\max} \cos(k(x - ct))$$

$$B_z = B_z(x, t) = \frac{E_{\max}}{c} \cos(k(x - ct))$$

Additional comments:
 For this solution, the **y** direction is called the **polarization** direction (the E field orientation)

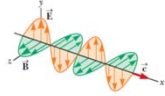

This is a periodic wave, where $k=2\pi/\lambda$ and λ represents the wavelength and the frequency of the wave is $kc=\omega=2\pi f$.

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 7

Homework hint:

5. -0.333 points My Notes SerPSE8 34.P013.M1

The figure below shows a plane electromagnetic sinusoidal wave propagating in the x direction. Suppose the wavelength is 58.0 m and the electric field vibrates in the xy plane with an amplitude of 18.0 V/m.

(a) Calculate the frequency of the wave.
 _____ MHz

(b) Calculate the magnetic field **B** when the electric field has its maximum value in the negative y direction.
 magnitude: _____ nT
 direction:

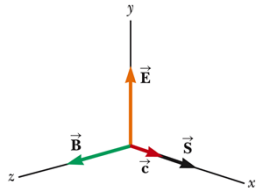

(c) Write an expression for **B** with the correct unit vector, with numerical values for B_{\max} , k , and ω , and with its magnitude in the form
 $B = B_{\max} \cos(kx - \omega t)$
 (Assume B is measured in nT, x is measured in m and t in s.)
 magnitude: _____ cos(_____ x - _____ t) nT
 direction:

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 8

Energy carried by electromagnetic waves:

Poynting vector:

$$\mathbf{S} = \frac{1}{\mu_0} \mathbf{E} \times \mathbf{B} \quad \text{units: } \frac{1}{\text{T} \cdot \text{m/Amp}} \cdot \frac{\text{N}}{\text{C}} \cdot \text{T} = \frac{\text{N}}{\text{m} \cdot \text{s}}$$

$$= \frac{\text{N} \cdot \text{m}}{\text{m}^2 \cdot \text{s}} = \frac{\text{J}}{\text{m}^2 \cdot \text{s}} = \frac{\text{W}}{\text{m}^2}$$

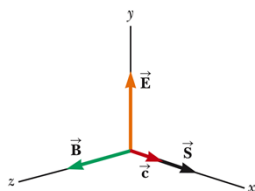

$$E_y = E_y(x, t) = E_{\max} \cos(k(x - ct))$$

$$B_z = B_z(x, t) = \frac{E_{\max}}{c} \cos(k(x - ct))$$

$$\Rightarrow \mathbf{S} = \frac{E_{\max}^2}{\mu_0 c} \cos^2(k(x - ct)) \hat{i}$$

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 9

Energy carried by electromagnetic waves – continued :

Poynting vector :

$$\mathbf{S} = \frac{E_{\max}^2}{\mu_0 c} \cos^2(k(x-ct)) \hat{\mathbf{i}}$$

Time averaged Poynting vector :

$$\mathbf{S}_{\text{avg}} = \frac{E_{\max}^2}{2\mu_0 c} \hat{\mathbf{i}}$$

Power carried by E - M wave :

$$P_{\text{avg}} = \mathbf{S}_{\text{avg}} \cdot \mathbf{A} = \frac{E_{\max}^2}{2\mu_0 c} \hat{\mathbf{i}} \cdot \mathbf{A}$$

3/29/2012 PHY 114 A. Spring 2012 – Lecture 16 10

Power carried by E - M wave :

$$P_{\text{avg}} = \mathbf{S}_{\text{avg}} \cdot \mathbf{A} = \frac{E_{\max}^2}{2\mu_0 c} \hat{\mathbf{i}} \cdot \mathbf{A}$$

Example :

typical laser pointer has $P_{\text{avg}} = 3 \times 10^{-3} \text{ W}$, $A = 3 \times 10^{-6} \text{ m}^2$

$$\Rightarrow E_{\max} = \sqrt{\frac{2\mu_0 c P_{\text{avg}}}{A}} = 870 \text{ N/C}$$

Radiation pressure

$$P_{\text{pressure}} \propto \frac{S}{c}$$

absorbing :

$$P_{\text{pressure}} = \frac{S}{c}$$

reflecting :

$$P_{\text{pressure}} = \frac{2S}{c}$$

3/29/2012 PHY 114 A. Spring 2012 – Lecture 16 11

Energy density within electromagnetic wave:

Electromagnetic energy density :

Electrical energy Magnetic energy

$$u = \frac{1}{2} \epsilon_0 |\mathbf{E}|^2 + \frac{1}{2\mu_0} |\mathbf{B}|^2$$

$$u_{\text{avg}} = \frac{1}{4} \epsilon_0 |E_{\max}|^2 + \frac{1}{4\mu_0} |B_{\max}|^2$$

$$u_{\text{avg}} = \frac{1}{2} \epsilon_0 |E_{\max}|^2 = \frac{1}{2\mu_0} |B_{\max}|^2 = \frac{S_{\text{avg}}}{c}$$

3/29/2012 PHY 114 A. Spring 2012 – Lecture 16 12

Sources of electromagnetic radiation

$$\oint \mathbf{E}(\mathbf{r}) \cdot d\mathbf{A} = \frac{Q_{in}}{\epsilon_0} \qquad \nabla \cdot \mathbf{E} = \frac{\rho}{\epsilon_0}$$

$$\oint \mathbf{B}(\mathbf{r}) \cdot d\mathbf{A} = 0 \qquad \nabla \cdot \mathbf{B} = 0$$

$$\int \mathbf{E}(\mathbf{r}) \cdot d\mathbf{s} = -\frac{d}{dt} \int \mathbf{B}(r) \cdot d\mathbf{A} \qquad \nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

$$\oint \mathbf{B} \cdot d\mathbf{s} = \mu_0 I_{in} + \mu_0 \epsilon_0 \frac{d}{dt} \int \mathbf{E}(r) \cdot d\mathbf{A} \qquad \nabla \times \mathbf{B} = \mu_0 \mathbf{J} + \mu_0 \epsilon_0 \frac{\partial \mathbf{E}}{\partial t}$$

→ Need accelerating charges to produce E-M radiation

14

Electromagnetic radiation from the sun

http://www.nasa.gov/mission_pages/sdo/news/first-light.html

A full-disk multiwavelength extreme ultraviolet image of the sun taken by SDO on March 30, 2010. False colors trace different gas temperatures. Reds are relatively cool (about 60,000 Kelvin, or 107,540 F); blues and greens are hotter (greater than 1 million Kelvin, or 1,799,540 F). Credit: NASA/Goddard/SDO AIA Team

Launched on Feb. 11, 2010, SDO is the most advanced spacecraft ever designed to study the sun. During its five-year mission, it will examine the sun's magnetic field and also provide a better understanding of the role the sun plays in Earth's atmospheric chemistry and climate. Since launch, engineers have been conducting testing and verification of the spacecraft's components. Now fully operational, SDO will provide images with clarity 10 times better than high-definition television and will return more comprehensive science data faster than any other solar observing spacecraft.

3/29/2012

PHY 114 A, Spring 2012 – Lecture 16

15

Electromagnetic radiation from quantum mechanics:
Atoms, molecules, solids

Ground state

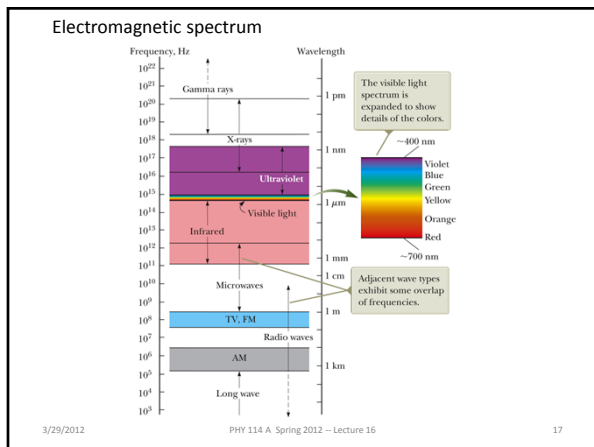

Excited state

Radiation

Spectrum

3/29/2012 PHY 114 A, Spring 2012 -- Lecture 16 16

Comment about solar energy
Technology to capture and use electromagnetic radiation from the sun and use it as a heat source or as a generator of voltage in special semiconductor devices
(see web page from Prof. Wesley Henderson from NCSU:
http://www.che.ncsu.edu/LEET/CHE596web_Fall2011/21_CHE596-015_2011-11-15_Renewables.pdf)

3/29/2012 PHY 114 A, Spring 2012 -- Lecture 16 18

Reminder:

Third exam – evenings of Mon-Thurs (4/2-4/5) – covering Chapters 29-34

- ~5 problems – show your work and reasoning for possible partial credit.
- Should bring 1 8½” x 11” sheet of paper to the exam (to be turned in with your exam papers).
- Should bring calculator for numerical work. Must not use cell phones or computers during the exam.
- Exams will be in Olin 107 Mon-Wed and Olin 101 Thurs
- 6-10 PM (must schedule by email before 3/30/2012)

3/29/2012 PHY 114 -- Review Chapters 22-28 20

Advice:

1. Keep basic concepts and equations at the top of your head.
2. Practice problem solving and math skills
3. Develop an equation sheet that you can consult.

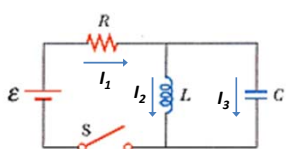

3/29/2012 PHY 114 -- Review Chapters 22-28 21

Problem solving steps

1. Visualize problem – labeling variables
2. Determine which basic physical principle(s) apply
3. Write down the appropriate equations using the variables defined in step 1.
4. Check whether you have the correct amount of information to solve the problem (same number of knowns and unknowns).
5. Solve the equations.
6. Check whether your answer makes sense (units, order of magnitude, etc.).

3/29/2012 PHY 114 -- Review Chapters 22-28 22

Comment on AC circuits:

$$\mathcal{E} - RI_1 - L \frac{dI_2}{dt} = 0$$

$$-L \frac{dI_2}{dt} + \frac{Q_3}{C} = 0$$

$$I_1 = I_2 + I_3$$

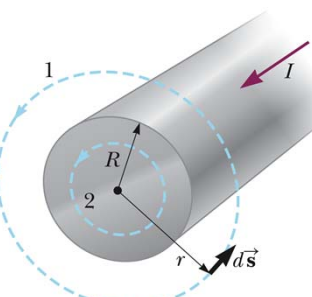

Solution method:

1. Transform differential equation in to algebraic equation using trig or complex functions
2. "Solve" algebra problem
3. Analyze for physical solution

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 23

Example using Ampere's law and Ampere-Maxwell law:

First consider Ampere's law and a wire with uniform current I

$$\oint \mathbf{B} \cdot d\mathbf{s} = \mu_0 I_{in}$$

At $r_1 > R$:

$$B 2\pi r_1 = \mu_0 I \frac{\pi R^2}{\pi R^2} \Rightarrow B = \frac{\mu_0 I}{2\pi r_1}$$

At $r_2 < R$:

$$B 2\pi r_2 = \mu_0 I \frac{\pi r_2^2}{\pi R^2} \Rightarrow B = \frac{\mu_0 I r_2}{2\pi R^2}$$

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 24

Example using Ampere's law and Ampere-Maxwell law:
 Now consider Ampere-Maxwell's law and a uniform electric field with a constant rate of change:

$$\oint \mathbf{B} \cdot d\mathbf{s} = \mu_0 \epsilon_0 \frac{d}{dt} \int \mathbf{E}(r) \cdot d\mathbf{A}$$

B at $r_1 > R$:

$$B 2\pi r_1 = \mu_0 \epsilon_0 \frac{dE}{dt} \pi R^2 \Rightarrow B = \frac{\mu_0 \epsilon_0 R^2}{2r_1} \frac{dE}{dt}$$

B at $r_2 < R$:

$$B 2\pi r_2 = \mu_0 \epsilon_0 \frac{dE}{dt} \pi r_2^2 \Rightarrow B = \frac{\mu_0 \epsilon_0 r_2}{2} \frac{dE}{dt}$$

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 25

Example using Ampere's law and Ampere-Maxwell law:
 Now consider Ampere-Maxwell's law and a uniform electric field with a constant rate of change -- connection to capacitance circuit where R denotes radius of plates

$$\oint \mathbf{B} \cdot d\mathbf{s} = \mu_0 \epsilon_0 \frac{d}{dt} \int \mathbf{E}(r) \cdot d\mathbf{A}$$

Electric field within capacitor plates (according to Gauss's law):

$$\frac{dE}{dt} = \frac{I}{\epsilon_0 \pi R^2}$$

Magnetic field between capacitor plates

B at $r_1 > R$: $B = \frac{\mu_0 \epsilon_0 R^2}{2r_1} \frac{dE}{dt} = \frac{\mu_0 I}{2\pi r_1}$

B at $r_2 < R$: $B = \frac{\mu_0 \epsilon_0 r_2}{2} \frac{dE}{dt} = \frac{\mu_0 I r_2}{2\pi R^2}$

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 26

Homework hint:

1. -0.334 points My Notes | Sep28 34.P.203

Consider the situation shown in the figure below. An electric field of 300 V/m is confined to a circular area of $d = 10.5$ cm in diameter and directed outward perpendicular to the plane of the figure. Consider that the field is increasing at a rate of 18.8 V/m \cdot s.

(a) What is the direction of the magnetic field at the point P , $r = 13.6$ cm from the center of the circle?

upwards

downwards

(b) What is the magnitude of the magnetic field at the point P , $r = 13.6$ cm from the center of the circle?

3/29/2012 PHY 114 A. Spring 2012 -- Lecture 16 27

Full Maxwell's equations

$$\begin{aligned} \oint \mathbf{E}(\mathbf{r}) \cdot d\mathbf{A} &= \frac{Q_{in}}{\epsilon_0} & \nabla \cdot \mathbf{E} &= \frac{\rho}{\epsilon_0} \\ \oint \mathbf{B}(\mathbf{r}) \cdot d\mathbf{A} &= 0 & \nabla \cdot \mathbf{B} &= 0 \\ \int \mathbf{E}(\mathbf{r}) \cdot d\mathbf{s} &= -\frac{d}{dt} \int \mathbf{B}(\mathbf{r}) \cdot d\mathbf{A} & \nabla \times \mathbf{E} &= -\frac{\partial \mathbf{B}}{\partial t} \\ \oint \mathbf{B} \cdot d\mathbf{s} &= \mu_0 I_{in} + \mu_0 \epsilon_0 \frac{d}{dt} \int \mathbf{E}(\mathbf{r}) \cdot d\mathbf{A} & \nabla \times \mathbf{B} &= \mu_0 \mathbf{J} + \mu_0 \epsilon_0 \frac{\partial \mathbf{E}}{\partial t} \end{aligned}$$

Lorentz force law:

$$\mathbf{F} = q(\mathbf{E} + \mathbf{v} \times \mathbf{B})$$
