Thermodynamics and Statistical Physics

Lecture 35

Review and examples

- Chemical potential example – atmospheric pressure
- Chemical potential example – battery operation

4/25/2012

PHY 341/641 Spring 2012 -- Lecture 35

1

24	3/26/2012	Bose and Fermi particles	6.5-6.11		
25	3/28/2012	Phase transformations	7.1-7.3	HW 21	03/30/2012
26	3/30/2012	Van der Waals Equation	7.4		
27	4/02/2012	Equilibrium constants	7.4-7.5	HW 22	04/04/2012
28	4/04/2012	Equilibrium constants	7.5		
	4/06/2012	Good Friday Holiday			
29	4/09/2012	Review -- begin take-home exam	5-7		
	4/11/2012	No class -- work on exam	5-7		
30	4/13/2012	Simulation of chemical potential	7.2	Exam continued	
31	4/16/2012	Classical treatment of dense systems	8.1-8.2	Exam due	
32	4/18/2012	Review exam: Virial expansion	8.3-8.4		
33	4/20/2012	Radial distribution function	8.5		
34	4/23/2012	More topics on classical fluids	8.6-8.9		
35	4/25/2012	Review			
36	4/27/2012	Review			
	4/30/2012	Student presentations I			
	5/02/2012	Student presentations II			
	5/09/2012	9 AM Final exam			

4/30-- Laurence, Zac, Eric
 5/2 -- Kristen, Audrey, Griffin

4/25/2012

PHY 341/641 Spring 2012 -- Lecture 35

2

Department of Physics

WFU Physics Colloquium

TITLE: Honors theses presentations

TIME: Wednesday April 25, 2012 at **3:30 PM**

PLACE: Room 101 Olin Physical Laboratory

Refreshments will be served at 3:00 PM in the Olin Lounge. All interested persons are cordially invited to attend.

*****Note early start time*****

SPEAKERS

- Matthew Martin
- Dillon Sanders
- Griffin Shoemaker
- Hannah Reynolds
- Molly Binder
- Daniel David

3

Example systems involving analysis of chemical potentials
Ref. Kittel and Kroemer, **Statistical Physics**

In the following examples, the “internal chemical potential” is augmented with an external potential which can be added to make a “total” chemical potential

Model of the variation of the atmospheric pressure with altitude based on the consideration of two volumes of gas at different heights in a uniform gravitational field in thermal and diffusive contact. (Ignore temperature and gravitational potential variations with height.)

4/25/2012

PHY 341/641 Spring 2012 – Lecture 35

4

Here m denotes the average mass per particle, and g denotes the gravitation acceleration.

4/25/2012

PHY 341/641 Spring 2012 – Lecture 35

5

Assuming ideal gas equation of state :

$$\begin{aligned}\mu_{\text{tot}}(y) &= -kT \ln \left[\frac{V}{N(y)} \left(\frac{2\pi mkT}{h^2} \right)^{3/2} \right] + \Phi_{\text{gravity}}(y) \\ &\equiv -kT \ln \left[\left(\frac{2\pi mkT}{h^2} \right)^{3/2} \right] + kT \ln(n(y)) + \Phi_{\text{gravity}}(y)\end{aligned}$$

where $n(y) \equiv \frac{N(y)}{V}$ represents the gas density as a function of height

Thermodynamic equilibrium implies:

$$\begin{aligned}\mu_{\text{tot}}(y) &= \mu_{\text{tot}}(0) \\ \Rightarrow kT \ln(n(y)) + mgy &= kT \ln(n(0)) \\ \Rightarrow n(y) &= n(0)e^{-mgy/kT}\end{aligned}$$

4/25/2012

PHY 341/641 Spring 2012 – Lecture 35

6

Variation of air density with height :

$$n(y) = n(0)e^{-mgy/kT} \equiv n(0)e^{-y/y_c} \quad y_c \approx 8.5\text{km}$$

4/25/2012

PHY 341/641 Spring 2012 -- Lecture 35

7

Another example of chemical potential analysis -- battery

Negative electrode (Pb): $\mu(\text{SO}_4^{-2})$
 $\text{Pb} + \text{SO}_4^{-2} \rightarrow \text{PbSO}_4 + 2e^-$

Positive electrode (PbO_2): $\mu(\text{H}^+)$
 $\text{PbO}_2 + \text{H}_2\text{SO}_4 + 2\text{H}^+ + 2e^- \rightarrow \text{PbSO}_4 + 2\text{H}_2\text{O}$

4/25/2012

PHY 341/641 Spring 2012 -- Lecture 35

8

Open circuit voltage:
 $\Delta V_+ - \Delta V_- = 1.6\text{V} - (-0.4\text{V}) = 2\text{V}$

Negative electrode (Pb): $\Delta\mu(\text{SO}_4^{-2}) = -2e\Delta V_-$
 $\Delta V_- = -0.4\text{V}$

Positive electrode (PbO_2): $\Delta\mu(\text{H}^+) = e\Delta V_+$
 $\Delta V_+ = 1.6\text{V}$
