

# **PHY 712 Electrodynamics**

## **10-10:50 AM in Olin 103**

### **Notes for Lecture 23:**

**Chap. 8 (Sec. 8.7) in Jackson**

### **Wave Guides**

- 1. Review of wave guide equations**
- 2. Rectangular resonant cavity**

17	Fri: 02/23/2024	Chap. 7	Electromagnetic plane waves	<a href="#">#16</a>	02/26/2024
18	Mon: 02/26/2024	Chap. 7	Electromagnetic plane waves	<a href="#">#17</a>	03/01/2024
19	Wed: 02/28/2024	Chap. 7	Optical effects of refractive indices	<a href="#">#18</a>	03/01/2024
20	Fri: 03/01/2024	Chap. 1-7	Review		
21	Mon: 03/04/2024	Chap. 8	Short lecture on waveguides - rectangular	Exam	
22	Wed: 03/06/2024	Chap. 8	Short lecture on waveguides - cylindrical	Exam	
23	Fri: 03/08/2024	Chap. 8	Short lecture on waveguides - resonant cavities	Exam	
	Mon: 03/11/2024	No class	<i>Spring Break</i>		
	Wed: 03/13/2024	No class	<i>Spring Break</i>		
	Fri: 03/15/2024	No class	<i>Spring Break</i>		
24	Mon: 03/18/2024	Chap. 9	Radiation from localized oscillating sources		

Note: Exam is due  $\leq 4$  PM today. Please include work done with Maple, Mathematica, etc. either in print or electronically, as well as a list of references that you used.

**Have a great spring break!**

# Boundary values for ideal conductor

Inside the conductor :

$$\mathbf{H}(\mathbf{r}, t) = e^{-\hat{\mathbf{k}} \cdot \mathbf{r} / \delta} \Re \left( \mathbf{H}_0 e^{i\hat{\mathbf{k}} \cdot \mathbf{r} / \delta - i\omega t} \right)$$

$$\mathbf{E}(\mathbf{r}, t) = \delta \mu \omega \frac{1-i}{2} \hat{\mathbf{k}} \times \mathbf{H}(\mathbf{r}, t)$$

At the boundary of an ideal conductor, the  $\mathbf{E}$  and  $\mathbf{H}$  fields decay in the direction normal to the interface.

Boundary conditions for fields outside ideal conductor:

$$\hat{\mathbf{n}} \times \mathbf{E} \Big|_S = 0 \qquad \hat{\mathbf{n}} \cdot \mathbf{H} \Big|_S = 0$$

# Wave guides – dielectric media with one or more metal boundary

Continuity conditions for fields near metal boundaries --

Ideal conductor boundary conditions:

$$\hat{\mathbf{n}} \times \mathbf{E} \Big|_S = 0 \qquad \hat{\mathbf{n}} \cdot \mathbf{H} \Big|_S = 0$$

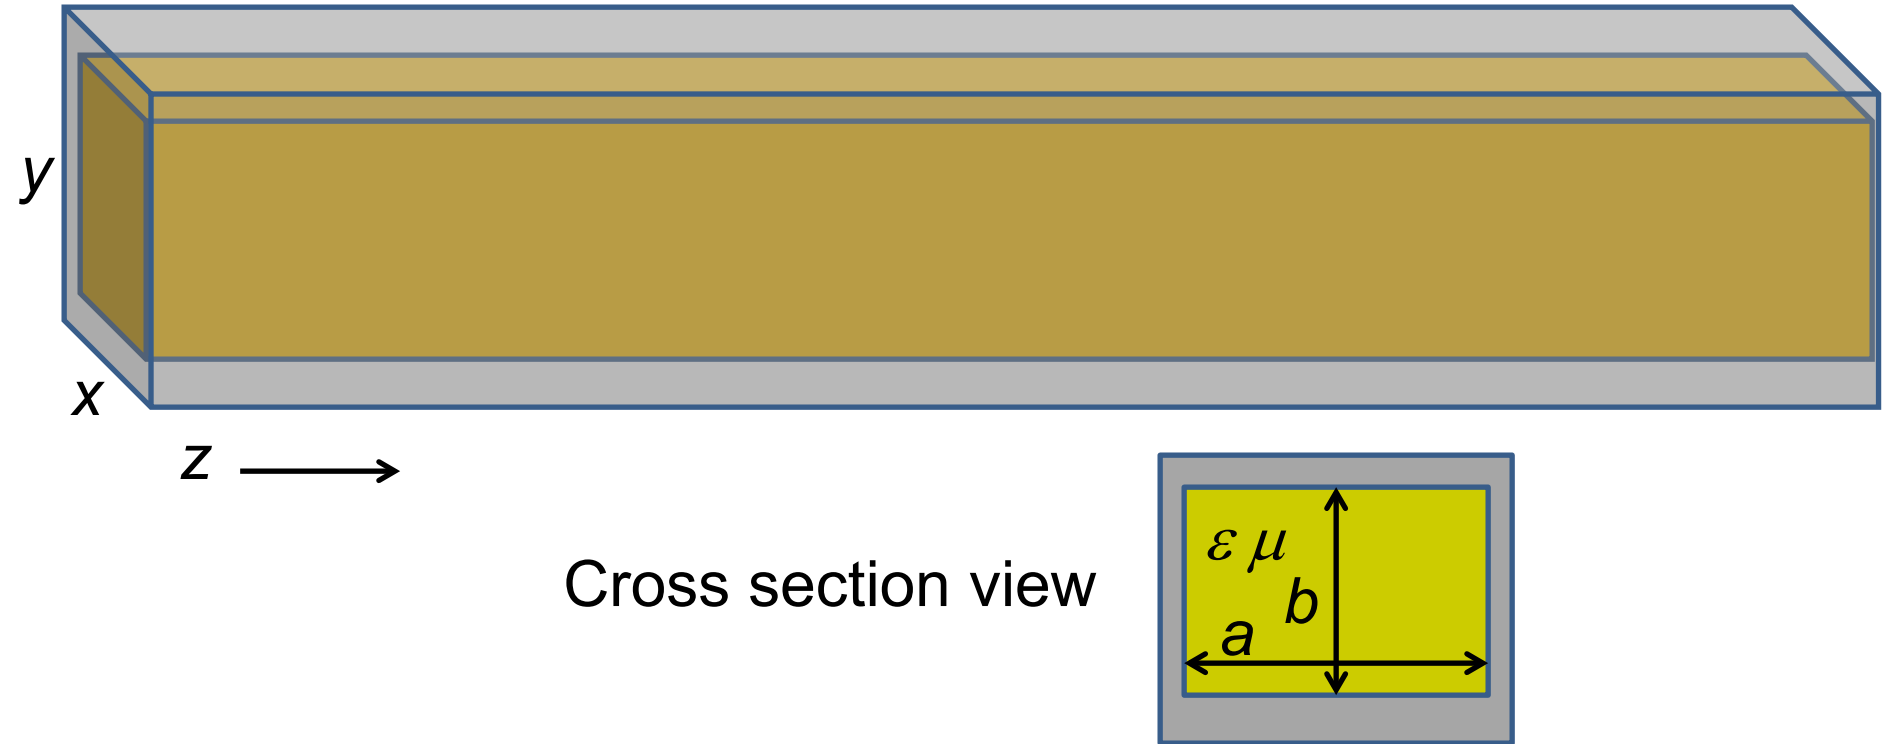

## Waveguide terminology

- TEM: transverse electric and magnetic (both E and H fields are perpendicular to wave propagation direction)
- TM: transverse magnetic (H field is perpendicular to wave propagation direction)
- TE: transverse electric (E field is perpendicular to wave propagation direction)

# Analysis of rectangular waveguide

Boundary conditions at surface of waveguide:

$$\mathbf{E}_{\text{tangential}}=0, \quad \mathbf{B}_{\text{normal}}=0$$

# Analysis of rectangular waveguide

$$\mathbf{B} = \Re \left\{ \left( B_x(x, y) \hat{\mathbf{x}} + B_y(x, y) \hat{\mathbf{y}} + B_z(x, y) \hat{\mathbf{z}} \right) e^{ikz - i\omega t} \right\}$$
$$\mathbf{E} = \Re \left\{ \left( E_x(x, y) \hat{\mathbf{x}} + E_y(x, y) \hat{\mathbf{y}} + E_z(x, y) \hat{\mathbf{z}} \right) e^{ikz - i\omega t} \right\}$$

Inside the dielectric medium: (assume  $\varepsilon$  to be real)

$$\nabla \cdot \mathbf{E} = 0$$

$$\nabla \cdot \mathbf{B} = 0$$

$$\nabla \times \mathbf{E} + \frac{\partial \mathbf{B}}{\partial t} = 0$$

$$\nabla \times \mathbf{B} - \varepsilon \mu \frac{\partial \mathbf{E}}{\partial t} = 0$$

## Solution of Maxwell's equations within the pipe:

Combining Faraday's Law and Ampere's Law, we find that each field component must satisfy a two-dimensional Helmholtz equation:

$$\left( \frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2} - k^2 + \mu\epsilon\omega^2 \right) \mathbf{F}(x, y) = 0. \quad \mathbf{F} = \mathbf{E} \text{ or } \mathbf{H}$$

propagation along z.

For the rectangular wave guide discussed in Section 8.4 of your text a solution for a TE mode can have:

$$E_z(x, y) \equiv 0 \quad \text{and} \quad B_z(x, y) = B_0 \cos\left(\frac{m\pi x}{a}\right) \cos\left(\frac{n\pi y}{b}\right),$$

$$\text{with } k^2 \equiv k_{mn}^2 = \mu\epsilon\omega^2 - \left[ \left(\frac{m\pi}{a}\right)^2 + \left(\frac{n\pi}{b}\right)^2 \right]$$

Maxwell's equations within the pipe in terms of all 6 components:

$$\frac{\partial B_x}{\partial x} + \frac{\partial B_y}{\partial y} + ikB_z = 0.$$

$$\frac{\partial E_x}{\partial x} + \frac{\partial E_y}{\partial y} + ikE_z = 0.$$

$$\frac{\partial E_z}{\partial y} - ikE_y = i\omega B_x.$$

$$ikE_x - \frac{\partial E_z}{\partial x} = i\omega B_y.$$

$$\frac{\partial E_y}{\partial x} - \frac{\partial E_x}{\partial y} = i\omega B_z.$$

For TE mode with  $E_z \equiv 0$

$$B_x = -\frac{k}{\omega} E_y$$

$$B_y = \frac{k}{\omega} E_x$$

$$\frac{\partial B_z}{\partial y} - ikB_y = -i\mu\epsilon\omega E_x.$$

$$ikB_x - \frac{\partial B_z}{\partial x} = -i\mu\epsilon\omega E_y.$$

$$\frac{\partial B_y}{\partial x} - \frac{\partial B_x}{\partial y} = -i\mu\epsilon\omega E_z.$$

## TE modes for rectangular wave guide continued:

$$E_z(x, y) \equiv 0 \quad \text{and} \quad B_z(x, y) = B_0 \cos\left(\frac{m\pi x}{a}\right) \cos\left(\frac{n\pi y}{b}\right),$$

$$E_x = \frac{\omega}{k} B_y = \frac{-i\omega}{k^2 - \mu\epsilon\omega^2} \frac{\partial B_z}{\partial y} = \frac{-i\omega}{\left[\left(\frac{m\pi}{a}\right)^2 + \left(\frac{n\pi}{b}\right)^2\right]} \frac{n\pi}{b} B_0 \cos\left(\frac{m\pi x}{a}\right) \sin\left(\frac{n\pi y}{b}\right),$$

$$E_y = -\frac{\omega}{k} B_x = \frac{i\omega}{k^2 - \mu\epsilon\omega^2} \frac{\partial B_z}{\partial x} = \frac{i\omega}{\left[\left(\frac{m\pi}{a}\right)^2 + \left(\frac{n\pi}{b}\right)^2\right]} \frac{m\pi}{a} B_0 \sin\left(\frac{m\pi x}{a}\right) \cos\left(\frac{n\pi y}{b}\right).$$

Check boundary conditions:

$$\mathbf{E}_{\text{tangential}} = 0 \quad \text{because:} \quad E_z(x, y) \equiv 0, \quad E_x(x, 0) = E_x(x, b) = 0$$
$$\text{and} \quad E_y(0, y) = E_y(a, y) = 0.$$

$$\mathbf{B}_{\text{normal}} = 0 \quad \text{because:} \quad B_y(x, 0) = B_y(x, b) = 0$$
$$\text{and} \quad B_x(0, y) = B_x(a, y) = 0.$$

# Solution for $m=n=1$

$$B_z(x, y) = B_0 \cos\left(\frac{m\pi x}{a}\right) \cos\left(\frac{n\pi y}{b}\right)$$

$$iE_x(x, y) = B_0 \left( \frac{\omega n \pi / b}{\left(\frac{m\pi}{a}\right)^2 + \left(\frac{n\pi}{b}\right)^2} \right) \cos\left(\frac{m\pi x}{a}\right) \sin\left(\frac{n\pi y}{b}\right)$$

$$iE_y(x, y) = B_0 \left( \frac{-\omega m \pi / a}{\left(\frac{m\pi}{a}\right)^2 + \left(\frac{n\pi}{b}\right)^2} \right) \sin\left(\frac{m\pi x}{a}\right) \cos\left(\frac{n\pi y}{b}\right)$$

# Solution for m=n=1

$$k^2 \equiv k_{mn}^2 = \mu\epsilon\omega^2 - \left[ \left( \frac{m\pi}{a} \right)^2 + \left( \frac{n\pi}{b} \right)^2 \right]$$

Now consider the case of a rectangular box bounded by an ideal conductor --

$$0 \leq x \leq a$$

$$0 \leq y \leq b$$

$$0 \leq z \leq d$$

Resonant cavity

Propagating wave form becomes a standing wave along  $z$ .

## Resonant cavity

$$0 \leq x \leq a$$

$$0 \leq y \leq b$$

$$0 \leq z \leq d$$

$$\mathbf{B} = \Re \left\{ \left( B_x(x, y, z) \hat{\mathbf{x}} + B_y(x, y, z) \hat{\mathbf{y}} + B_z(x, y, z) \hat{\mathbf{z}} \right) e^{-i\omega t} \right\}$$

$$\mathbf{E} = \Re \left\{ \left( E_x(x, y, z) \hat{\mathbf{x}} + E_y(x, y, z) \hat{\mathbf{y}} + E_z(x, y, z) \hat{\mathbf{z}} \right) e^{-i\omega t} \right\}$$

In general:  $E_i(x, y, z) = E_i(x, y) \sin(kz)$  or  $E_i(x, y) \cos(kz)$

$$B_i(x, y, z) = B_i(x, y) \sin(kz) \text{ or } B_i(x, y) \cos(kz)$$

$$\Rightarrow k = \frac{p\pi}{d}$$

Now consider the case of a rectangular box bounded by an ideal conductor --

$$0 \leq x \leq a$$

$$0 \leq y \leq b$$

$$0 \leq z \leq d$$

Resonant cavity

$$k^2 = \left(\frac{p\pi}{d}\right)^2 = \mu\epsilon\omega^2 - \left(\frac{m\pi}{a}\right)^2 - \left(\frac{n\pi}{b}\right)^2$$

$$\Rightarrow \omega^2 = \frac{1}{\mu\epsilon} \left( \left(\frac{m\pi}{a}\right)^2 + \left(\frac{n\pi}{b}\right)^2 + \left(\frac{p\pi}{d}\right)^2 \right)$$

For example --

$$B_z(x, y, z) = B_0 \cos\left(\frac{m\pi x}{a}\right) \cos\left(\frac{n\pi y}{b}\right) \sin\left(\frac{p\pi z}{d}\right)$$

$$\Rightarrow \omega^2 = \frac{1}{\mu\epsilon} \left( \left(\frac{m\pi}{a}\right)^2 + \left(\frac{n\pi}{b}\right)^2 + \left(\frac{p\pi}{d}\right)^2 \right)$$

Typically, microwave oven use frequencies of 2.45 GHz and the wavelength is ~12 cm
