I. Setting up files on your computer
   a. Create a lab7 folder in your UserData\csc101 folder
   b. In this folder copy one picture that you have that you would like to change in some way. These changes can be anything, including cleaning up the image or even removing something (or someone) from the image. This will give you an opportunity to try out some neat Photoshop editing techniques.

II. Pre-Lab Tutorials and Reading

There are many tutorials online on how to complete certain projects in Photoshop. If you do a google search for "Photoshop Tutorials", you will be bombarded with a massive number of results. Below are links to a few tutorials that have some pretty simple things to try.
   - http://blog.dpboards.com/?p=17
   - http://www.good-tutorials.com/tutorials/photoshop
   - Perhaps the two most popular tutorials are from the techeblog page. These two are titled "Fade Images Together" and "Sin City Style Images"

III. Lab Instructions

Print out the lab instructions for lab 7. They can be found by going to the course web page at:
http://www.wfu.edu/~pryoree/
