

# How Not To Cheat on Your Homework

You may not:

- Copy any or all of the homework from anyone else.
- Look at pre-written solutions to any of the homework problems from any source.
- Try to get the TAs, or the Math Center tutors to tell you the answer or write out part or all of the solutions to any assigned homework problem.
- Use a calculator, computer algebra system, or website unless explicitly permitted by the problem statement.
- Request online assistance with a homework problem, unless you have been granted permission in advance by the instructor.
- Request online assistance with an exam problem.

You May:

- Talk to your fellow students about the homework. You are welcome, indeed encouraged, to collaborate and share ideas about how to do the homework.
- Ask Dr. Rouse, the TAs, or the Math Center tutors about the concepts behind the homework. Sometimes they may be able to give you a hint to get you started in the right direction.
- Ask Dr. Rouse, the TAs, or the Math Center tutors to work a problem that is similar to those on the homework.
- Compare your work with other students *after* you have done the problem, for example to see if you got the same answer to a calculation problem.
- Use a calculator, computer algebra system, or website to *check* your answer or work on a problem once you have written out a complete solution.
- Request permission to seek online assistance with homework problems.
