

Truth, Reality, and Objectivity: Philosophical Themes in Physics

AI Policy

The use of AI is allowed (actually required) in revising papers that are originally drafted in class as explained in the syllabus. You may use Gemini or another AI bot as long as you get permission to use that bot from the instructor beforehand.

You are allowed to use AI for the pre-class write-ups but I think actually doing the reading and writing your own response is the most likely way to truly understand the material. The main goal is to understand the material and be able to discuss it in class. Exams will cover this same material so cutting and pasting AI generated responses into the pre-class write-ups is not likely to be a good strategy in learning the material.

You cannot use AI for Exams and in-class paper writing – any use of computers or phones will not be allowed for these in-class activities.

Using AI in a way that is not permitted is considered a violation of the Honor Code. If you are uncertain about whether or not you can use AI in any other instance please ask!
